# Barr's Pure Lawn Grass Seeds

Produce Beautiful Smooth Lawns, Tennis and Cricket Grounds, Bowling Greens, etc. Renovate Lawns in September, after the wear of Summer.

The following Mixtures of Grass Seeds are composed of thoroughly cleaned seeds of highest quality only, and contain neither Clover nor coarse Grasses; they cannot fail to give the greatest satisfaction. The seed is sold by weight, as being the only correct method of estimating the quantity needed for a given space. The Mixtures marked \* are more expensive this year, owing to the scarcity of some of the short fine-leaved grasses they are composed of.

Sow 80 lb. per acre, or 1 lb. to every 50 square yards, if the ground is required to be covered quickly, and for renovating bald patches, or where the grass is thin or poor, especially after a summer's hard wear and under trees, sow 20 to 30 lb. per acre or  $\frac{1}{2}$  lb. to every 50 square yards.

Leaflet on the Management of Lawns free on application.

- \*Barr's New Mixture of Dwarf Evergreen Grasses for producing an Extra Fine Smooth Lawn, a special mixture of the finest-leaved and dwarfest-growing perennial grasses, which from their fine, close, slow habit of growth and pleasing colour are best suited for forming lawns of the shortest and finest herbage, and thus greatly economising labour in mowing. Per lb. 2s. 3d.; 20 lb. for 42s.
- \*Barr's "Standard" Evergreen Grasses, for Garden Lawns, Tennis Courts, etc.
  This mixture is composed principally of the fine-leaved dwarf-growing grasses, all the seeds being highly cleaned and of pure and genuine quality. Per lb. 1s. 8d.; 10 lb. for 16s.; 25 lb. for 38s.
- "Thames Embankment" Evergreen Grasses for Parks, Cricket Grounds, and Bowling Greens, a special mixture which has been found very successful on the Thames Embankment, and in the formation and renovation of many public and private parks and squares around London and throughout the country. Per lb. 1s.; 25 lb. for 24s.
- \*Barr's Special Mixture of Evergreen Grasses for sowing under Trees, a careful selection of those grasses most suitable for sowing under trees or in shady places. Per lb. 2s. 6d.; per 10 lb. 24s.
- Flne-leaved Fescue Grass (Festuca ovina tenuifolia), for sowing where little bulbs are to be naturalised, like Narcissi Cyclamineus, Minimus, etc.; also Scillas, Chionodoxas, Snowdrops, etc. Per 1b. 3s.
- Dutch Clover, Finest White. No Clover is included in the above mixtures of Grasses, as we consider a lawn should consist of Grass alone. If Clover is desired, however, it may be used at the rate of 3 to 5 lb. per aere; but it is preferable to sow the Clover separately from the Grass Seed. Per lb. 18. 6d.

# Barr's Special Lawn Phytobroma.

The best manure for Grass Lawns, Tennis Courts, Bowling Greens, Golf Links, etc. Apply Spring and Autumn, using 2 oz. to the square yard at each application.

Bapr's Lawn Phytobroma is composed of those ingredients calculated to encourage a vigorous growth of grass only, and in this respect differs from the potash manures, which are apt to stimulate clovers and coarse weeds. We can confidently recommend it for all grass-lands, as, by its use, a thicker growth and a richer colour will be obtained. It is a highly concentrated manure, and is therefore economical in use, a small quantity only being required at each application. Circular with fuller particulars sent on application.

Nett Prices—2 lb. tin, 1s.; In bags—7 lb., 2s. 6d.; 14 lb., 4s. 6d.; 28 lb., 7s. 6d.; 56 lb., 12s. 6d.; 1 cwt., 20s.

Prepaid Orders for 28 lb. and upwards sent Carriage Paid to any station in Great Britain or to any port on the Irish Coast.

### Five Gold Medals awarded 1908.

We have again received the highest awards this season, our exhibits having received Gold Medals at London, Birmingham, Edinburgh, Shrewsbury, and Brecon.

# A few Practical Hints on Bulb Culture. Culture for Spring-flowering Bulbs out of Doors.

Proper Condition of Soil,—Plant bulbs only when the ground is in a nice friable state, and never when the soil is wet and sticky; in such cases plant later when the soil is in a good friable condition.

Preparing Ground for Bulbs.—After digging or trenching, the ground should be allowed to settle at least ten days before planting.

Depth to Plant.—Many amateurs commit the fault of planting too deeply, and thousands of bulbs are spoilt in this way annually (crocuses especially). A good general rule to follow is, to cover the bulb with soil once and a half to twice its own depth, but not more, measuring the bulb from base to shoulder. Thus a dasfodil bulb measuring two inches from base to shoulder should be covered with three to four inches of soil, and a crocus bulb measuring one inch in depth with only one and a half to two inches of soil.

Proper time to Plant and Best Position.—Information on this subject is given at the heading of each family. Amateurs frequently fail with many bulbous plants through planting at the wrong season, thinking that because September is the proper time to plant crocuses, all other autumn bulbs should be planted in the same month: whereas Tulips, Ancmones, Ranunculi, Ixias, Sparaxis, Early Gladioli, etc., should not be planted before October or November.

Manure for Bulbs.—All bulbs object to the ammonia in fresh stable manure, such therefore should never be used, but only well-decayed stable or cow manure; the material from an exhausted hot-bed is a good manure, especially on light soils. The safest manures for all bulbs growing outdoors is PHYTOBROMA (price 20/- per cwt.; 2/6 per 7 lbs.) or phosphatic basic slag (price 10/6 per cwt.; 1/- per 7 lbs.) for heavy soils, and crushed bones (price 14/- per cwt., 1/3 per 7 lbs.) for light and sandy soils. The PHYTOBROMA should be applied at the rate of 8 cwt. per acre, or 3 oz. per square yard, early in spring, when top growth is showing; PHOSPHATIC BASIC SLAG OR CRUSHED BONES should be put in the ground with the bulbs at the time of planting, the former at the rate of 1 ton per acre, or 7½ oz. per square yard, and the latter at the rate of 4 cwt. to the acre, or 1½ oz. to the square yard, and after plauting, sprinkle on the surface of the ground SULPHATE OF POTASH at the rate of 2 cwt. per acre or ¾ oz. per square yard (price 21/- per cwt., 1/9 per 7 lbs.). Where basic slag or crushed bones are used, PHYTOBROMA may also be given at the rate of 1½ oz. to the square yard in spring, when top growth is showing. On hot dry and sandy soils, old stable manure may with advantage be used, to act as a sponge to hold moisture in the soil; it should be dug in 15 to 18 inches deep, so as not to come in contact with the bulbs. Where bulbs are grown in quantity for cutting, plant them on a piece of ground off which a vegetable crop (potatoes by preference) has been taken. The previous manuring for the potatoes, and the working of the soil in lifting them, brings the ground into first-rate condition for bulbs, and no more manure is required.

For bulbs grown in pots 1 lb. of Phytobroma should be mixed with every bushel of soil, and a teaspoonful should be used as a surface dressing when the flower-buds are forming (see page 94).

Top Dressing.—Where possible, we advise a top dressing to all bulbs through the winter months with some light material such as long straw litter, cut heather, cut furze branches, etc., or cut fern bracken resting on pea sticks (cut fern used by itself lies too wet and is apt to rot the young growths) The advantage of this light covering is that it keeps the surface soil sweet by preventing the heavy autumnal rains from beating down the earth's crust; it also protects any early top growth.

Lifting and Replanting.—When bulbs are lifted they should not, if possible, be replanted on the same ground, but where other bulbs or plants have previously been growing: thus, where Tulips have been growing last season, plant Narcissi this autumn, and so on.

### Culture for Spring-flowering Bulbs in Pots or Boxes.

Time of Potting.—From the middle of September to the middle of October is the best month for potting Spring-flowering bulbs.

The best compost to use is a mixture of two-thirds good fibrous loam (which should be pulled to pieces by the hand and not passed through a sieve, so as to retain in the soil as much old root fibre as possible), and one-third old decayed leaf soil, with a sprinkling of sharp silver sand, adding 1½ lbs. of bone meal or 1 lb. of Phytobroma (see page 94) to every bushel of soil, which mix well together before using. Never pot in soil that is wet or sticky.

The pots should be carefully washed or wiped clean before using. Never pot in dirty or wet pots.

Good drainage should be secured by placing three or more picces of broken crocks over the drainage hole, placing the crocks with bevelled sides uppermost, and then covering with a little rough fibre from the loam. When boxes are used, the slit at bottom of box should be covered with crocks, and a good layer of rough fibrous loam placed at bottom of box, or a layer of leaf soil to ensure perfect drainage.

Covering the Bulbs.-The larger bulbs need not be quite covered with soil, the level of which

should be half an inch below the rim of the pot, to allow of watering when the bulbs are in growth.

CULTURE OF BULBS IN POTS OR BOXES-continued.

After potting, stand the pots or boxes outside in the open, under a north wall by preference, on a firm bottom such as a bed of ashes or a gravel path to prevent the entrance of worms. Then cover with Cocoa Fibre, ashes, or old decayed leaf soil, pressing down the covering material in between the pots, which should be completely buried to a depth of 3 to 4 inches from the top. This will secure a natural and moist condition to the bulbs and encourage root action. So long as the pots are plunged in the open they will require no watering.

The pols or boxes should remain plunged for a period of not less than twelve weeks, in order that the bulbs may get well rooted, after which portions may be removed indoors in succession, selecting first those which bloom naturally early. Place first in a cold frame, cool greenhouse, or cold sitting-room free from draughts, and keep partially shaded for a few days, giving water gradually. Very weak liquid manure-water may then be given once a week until they come into bloom. Those that are wanted in bloom early may, after the flower buds are advanced, be placed in a warmer temperature, such as a slow forcing-house, but this should never exceed 65° if fine blooms are desired. The plants should always be kept as near to the glass as possible and not allowed to get drawn, from an insufficient supply of light or air. On no account should bottom heat be given. A frequent mistake made in forcing bulbs is that they are removed from the plunging-bed too early, before they have made a sufficient quantity of fibrous roots. They are then at once subjected to heat, and failure is the result. It is a good plan, when bulbs are removed from the plunging-bed, to place an inverted flower-pot over them for a day or two to prevent any check from draughts to the young top growths.

Pot-Culture of Early Gladioli, Ixias, Sparaxis, Tritonias, Babianas, Calochorti, etc. These bulbs start early into growth and therefore should not be potted up before the end of October to November. The pots should be plunged up to the rim only (not covered) in a cold frame, or under a south wall, for about three months, after which the treatment is similar to that for Spring-flowering bulbs.

# Culture of Spring-Flowering Bulbs in Vases and Bowls.

Such as Hyacinths, Tullps, Daffodils, Crocuses, Sollias, Chionodoxas, Snowdrops, etc.

A charming effect can be obtained by growing spring-flowering bulbs in fancy vases and bowls, with or without drainage, by simply using our specially prepared Fertilised Fibre, Shell and Charcoal Mixture (3s. 6d. per bushel, 1s. per peck); the mixture is light, clean, and nice to handle, and remains sweet (an important matter where the vases used have no drainage holes); indeed, it is in every way preferable to soil for growing bulbs in fancy bowls and vases.

Three bulbs of N. Queen of Spain growing in a 4-inch "Doullon Ware" Vase.

Culture.-Fill the vase or bowl with the Fibre, Shell and Charcoal Mixture up to within a little below the rim, and plant the bulbs in the same manner as with ordinary potting soil, just covering them. After planting, plunge the bowls or vases out of doors on a bed of cocoa fibre or ashes, and cover entirely with eocoa fibre, leaving them thus for about 12 weeks; they may then be transferred to a sunny window of a cool airy sitting-room (selecting a window that gets the morning sun) or to a cool greenhouse placed close to the glass, where they may be flowered in the same way as pot Hyacinths; they should be kept as near the glass as possible, and given sufficient light and air to prevent the foliage beeoming drawn. When the flower buds are advanced, they may be removed to a warmer temperature, such as a slow forcing-house or a warmer sitting-room, still being given as much light as possible. No bottom heat must ever be given, neither should they be placed in too warm a temperature until the flower buds are well developed.

Where it is not convenient to place the bowls outside they may be plunged in cocoa fibre in a cold frame, or cool airy cellar, giving sufficient water after planting to make the fibre mixture moderately damp. For the first week or two after planting, water must be given sparingly, sufficient only to keep the fibre mixture damp enough to encourage root action; as soon as the bulbs are well rooted, water should be given more freely, the fibre mixture being then kept quite moist. The fibre must never be allowed at any time to become dry, even for a day, or the bulbs will suffer.

SPECIAL FANCY VASES AND BOWLS for growing Daffodils and other bulbs in.

We have had special little fancy vases made for us by Messrs. Doulton for the abovenamed purpose. The vases are of elegant shape, of a neutral art drab shade, and without
drainage holes, thus saving the use of saucers. They will be found most useful for growing Spring-flowering
bulbs in, either for table decoration or the greenhouse. During Summer they may be used for table
decoration planted with Pansies or such low-growing hardy flowers, or for standing little pot-plants in.

Barr's "Doulton-Ware" Bulb Vases (as illustrated):-21 in. diameter, -/9; 4 in. dia., 1/3; 5½ in. dia., 2/-; 7 in. dia., 3/- each.

Fancy Decorated Japanese Bowls:—5 in. diameter, -/10; 6 in. dia., 1/3; 7 in. dia., 1/9; 84 in. dia., 3/-; 91 in. dia., 4/-; 103 in. dia., 6/-; 12 in. dia., 8/6 each.

Barr's Fertilised Fibre, Shell, and Charcoal Mixture, for growing bulbs in Vases, Bowls, Jardinets, etc., 3/6 per bushel; 1/- per peck (bags free).

# Barr's Famous "Covent Garden"

# Collections of Bulbs.

These Collections are not subject to Cash Discount, the prices being strictly nett. In the case of Prepaid Orders, however, all Collections are delivered Carriage Paid.

(After November 1 we may find it necessary to make slight changes in the Collections.)

### (A) Barr's 21/- Collection of Bulbs for Forcing.

Contains over 300 Bulbs of fine quality, as follows:

```
25 Sweet-scented Single Jonquils | 6 Single Tulip, Cottage Mald
12 Choice Named Hyacinths
12 Early White Roman Hyacinths
                                     3 Daffodil Golden Spur
                                                                                         Keizerskroon
        Blush Italian
                                                Henry Irving

ALSTRÖMERIA aurantiaca major, a fine improved form of the old A. aurantiaca, flowers large, brilliant deep orange and searlet, centre petal flaked maroon on gold; a showy hardy plant for sunny borders, flowers valuable for cutting, ht. 3 to 4 ftper doz. 7/6	0	8
AMARYLLIS		
Belladonna elata, a handsome variety of the popular Belladonna Lily, growing taller with dark stems and flowers of a deep rose shade; it also blooms a month earlier and is a valuable plant for establishing at the foot of a south wall or for pot cultureper doz. 24/-	2	3
ANEMONE		3
"St. Brigid," an extra fine strain of these lovely Poppy Anemones, flowers very large, mostly semi-double, with finely divided pctals, and of the most brilliant and varied shades of colour, all having a handsome blue-black central boss; very graceful in habit, ht. I ft.		
Beauty of Athens, a very pretty variety of the Starry Windflower (A. hortensis),	-	_
with large flowers ranging in shade from brilliant carmine to eherry-rose and blush, ht. 3 ftper doz. 7/6	0	S
Pink Pearl, a lovely new variety of the Single Poppy Anemone (A. coronaria), having large flowers, silvery rose with black central boss surrounded by a white ring, ht. I ft	0	8
ARUM aristatum, a dainty little Dragon Arum with brilliant red spathe and blackish spadix, pleasantly scented; this Arum, like the Monarch of the East, may be flowered in a dry state without the aid of soil or water		
ASTILBE chinensis Davidli, a very handsome new Chinese hardy border perennial, producing large plumes of handsome rich crimson-purple flowers with violet anthers, ht. 3 to 5 ft. First-Class Certificate R.H.S., August 1902per doz. 10/6	I	0
AUBRIETIA (Rock Cress)—Beautiful New Varieties.		
Bridesmald, raised at our Surbiton Nurseries, large flowers of a most beautiful soft blush.		
a delightful new shade; a gem for border or rock gardenper doz. 7/6	0	9
Lavender, a beautiful new variety of a lovely clear lavender blue shade, 10/6 Mrs. E. M. Crosfield, a fine new variety raised by E. M. Crosfield, Esq., flowers large,	I	0
of a rich violet-blue shade, very fineper doz 15/-	I	6
Prichard's A1, large deep violet flowers. AWARD OF MERIT R.H.S, 7/6	0	9
tauricola alba, very beautiful variety of dwarf compact habit, flowers opening white and passing off a pretty shade of silvery lilae, ht. 3 inper 100, 42/-; per doz. 5/6	0	6
CALOCHORTUS Venustus—Eldorado strain, a fine strain of the lovely Butterfly Tulips. (See page 20.)		
COLCHICUM		
<b>speciosum album,</b> a grand Meadow Saffron with very large snowy white flowers, rare and beautiful	7	6
CROCUS, Rare and Beautiful Species, autumn, winter, and spring-flowering, gems for the rock garden and pots. Special descriptive list on application.		
CYRTANTHUS		
angustifolius grandifiorus, the finest of all the Cyrtanthi of the Monella section, and a handsome greenhouse plant for autumn flowering; it produces spikes 1½ to 2 ft. high, bearing umbels of 12 to 15 flowers, of a brilliant orange-searlet	5	6
g.		

		_
CYRTANTHUS—continued.	5	d
Marian, an elegant hybrid between C. Intescens and a form of C. angustifolius, producing freely spikes a foot long, bearing fine heads of curved flowers yellow and bright red; a fine greenhouse plant, ht. 12 to 15 in. AWARD OF MERIT R.H.S., April 5th, 1904	3	6
sanguineus glaucophyllus, flowers nearly 4 in. aeross with broad recurving petals, colour sparkling salmon-searlet with golden authers, interior of flower lined blood-crimson; a grand variety	6	6
EURYCLES		
Cunninghami (The Brisbane Lily), a handsome stove or warm greenhouse bulbous plant allied to the <i>Paneratium</i> , with handsome broad foliage and large heads of pearly white flowers, ht. I ft. Pot up in February and place in bottom heat, giving abundance of water while the plants are in growth	2	0
sylvestris (sym. australasica amboinensis), the Amboyna Lily, a handsome plant for warm greenhouse or stove, having a broad heart-shaped foliage and a large umbel of tubular pearly white flowers, ht. 1 to 2 ftper doz. 12/6	1	3
,, extra strong bulbs ,, 21/-	2	0
FREESIA		
<b>Chapmanii,</b> a beantiful new hybrid Freesia, a cross between <i>F. aurea</i> and <i>F. refracta alba</i> , bearing elegant racemes of flowers nearly the size of <i>F. refracta alba</i> , varying from primrose to canary with golden shading and brilliant orange blotch, delicately fragrantper doz. 30/-	2	9
refracta alba, The true Pure White variety. See page 29.		
<b>Tubergeni</b> (F. refracta alba × F. Armstrongi), a lovely new hybrid with flowers the size of <i>Freesia refracta alba</i> , of a delicate rose-lilac shade with white throat and base of tube bronzy gold, deliciously scentedper doz. 36/-	3	3
Tubergeni "Amethyst," flowers a charming soft shade of lavender or manve, very beautiful. AWARD OF MERIT R.H.S., 1907	3	6
·	3	
GERBERA Jamesoni (Barberton Daisy), a very handsome plant from South Africa, bearing large showy flowers, resembling giant daisies, colour fiery scarlet. Suitable for very hot sheltered sunny gardens, or may be grown as a cool greenhouse plant.	_	c
per doz. 10/6 & 15/-; 1/- &  Extra strong plants, ,, 24/- & 36/-; 2/6 &	I	6
smaller plants, ready for potting on, per doz. 7/6	3	9
GLADIOLUS		
primulinus (Maid of the Mist), a rare and lovely species found growing in the neighbourhood of the Victoria Falls on the Zambesi River, where the spray at times completely covers it. The flowers, which are of a beautiful soft primrose-yellow, are of quaint hooded form and borne on spikes 2 to 3 ft. high. Easily grown in pots in a cold greenhouse or out of doors in warm localities; while in full growth it should have a liberal		
princeps, the largest-flowered and perhaps the most showy Gladiolus ever raised. Flowers of great size, very open, and beautifully formed, brilliant deep scarlet with white stripe down to the first of the flower largest size.	4	
centre of petal; remarkably effective in the flower-border	1	0
2 in. longper doz. 21/-	2	0
GLORIOSA Leopoldi, a fine new Glory Lily from the Congo, producing an abundance of beautiful self-golden-yellow flowers; a grand warm greenhouse climber	3	6
HELONIOPSIS breviscapa, a charming little plant introduced by us from Japan, producing out-of-doors in February and March sturdy little spikes 4 in. high studded with dainty white flowers passing off rose; it delights in a half-shady situation. AWARD OF MERIT R.H.S. See coloured plate in "The Garden," July 22nd, 1905per doz. 15/-	1	6
HEPATICA		
angulosa alba, a pure white-flowered form of the handsome H. angulosa and a valuable addition to this lovely family. We obtained an AWARD OF MERIT for this plant from the R.H.S	I	0
Double White, a rare and beautiful variety with pure white very double flowers.  FIRST CLASS CERTIFICATE R.H.S.	5	6
HYMENOCALLIS Amancæs, the Golden-Yellow Peruyian Daffodil, a rare and hand- some greenhouse bulbous plant, ht. 1½ to 2 ftper doz. 36/-	3	6

SPIRÆA—Two lovely New Varieties, being crosses between Spiræa chinensis and japonica compacta multiflora; valuable acquisitions both for out-door or greenhouse decoration. They are both good forcers. Awarded a GOLD MEDAL by the R.H.S. at Holland House Show 1904.		
	I	8
Queen Alexandra, a handsome plant of elegant spreading habit and large flower plumes of a pretty light rose (or when forced a very pale rose)per doz. 17/6	I	8
SPIRÆA Kamschatica rosea, bearing large heads of pale rose-coloured flowers;	ľ	6
TULIPS—New Cottage Tulips and species. Mostly May-flowering.		
Fireblaze (3), very large long flower, canary-yellow heavily flushed crimson-scarlet at margin,	_	8
Golden Bronze (4), flower large of beautiful saucer form, colour glossy golden-bronze	0	
inglescombe Yellow (4), may be called a Yellow Darwin Tulip, large globular flowers of perfect form of a glossy canary-yellow, a remarkably beautiful flower, ht. 18 in.	2 I	3
Kaufmanniana, Extra selected varieties, fine selected forms of this beantiful Tulip,		3
Lady of the Lake (2), a most levely Tulip, flower a delicate pale lemon shaded	I	6
Louis XIV. (3), globular flower of immense size, with broad petals rich purple heavily flushed golden-bronze at margin, inside golden-bronze shading to bronzy purple, very tall and	2	3
Mrs. Kerrell, a flower of elegant form with pointed petals, the three outer ones slightly	3	0
reflexing, colour a beautiful light rose with delicate amber tinge, centre white bordered electric-blue, very scarce	3	3
Quaintness (4), large handsome long flowers, inside shaded mahogany on a dark golden ground, outside flushed deep rose, very distinct. AWARD OF MERIT R.H.S., 1905		6
Scarlet Emperor (3), a very fine bold flower of a brilliant glowing scarlet, with rich clear yellow centre and black anthers, a remarkably handsome Tulip. First-Class Certificate R.H.S., May 17th, 1904per doz. 21/-		0
Walter T. Ware, a grand Tulip and the richest deep golden of all, flowers globular, with broad petals, the three outer ones reflexing at the top, very beautiful. A wonderful lasting Tulip, ht. 18 in. Award of Merit R.H.S., May 15, 1906only a few bulbs for saic 21		0
TULIP, Parrot, new break of colour.		
<b>Sensation,</b> a remarkably handsome variety and a great novelty, flowers very large, with deeply cut and eurling petals, heavily blotched and striped blackish purple on a white ground, quite a new eolour in Parrot Tulips. <i>Very scarce</i> (only a few bulbs in existence)		

# Hardy Bulbs & Plants.

For extensive planting in Shrubberies, Wild Gardens, Woodlands, Grass Lands, etc.

MUSCARI "HEAVENLY BLUE" ESTABLISHED ON A HEDGE BANK AT OUR SURBITON NURSBEIES.

#### A Few Remarks on Naturalising Bulbs in Grass, etc.

This fascinating phase of gardening deserves more attention than has hitherto been bestowed upon it. No sight is more delightful than the fresh brightness of spring-flowers growing freely in grass land or lending colour to woodland walks, hedgerows, and ditches, here and there nestling at the foot of trees, or establishing themselves on sloping banks.

For naturalising in grass spring flowers are especially suitable, as they bloom and are over before the grass grows tall enough to hide their beauty. Amongst our spring-flowering bulbs there are many gens which refuse to grow in cultivated borders, but when planted in grass, where they enjoy a cooler and more even temperature, they soon become established, and multiply freely until a regular colony is formed which greatly adds to the charm of the landscape.

All formality of arrangement should be avoided, the bulbs being scattered freely from the hand and planted where they fall. Large irregular breaks of one kind of bulb should be made in order to obtain the finest effect.

In planting under trees select spots where the soil is deepcst and where the drip is least.

Those whose gardens are of limited size might make them very beautiful in spring, by utilising the fringes of their lawns and any grassy mounds or shady shrubbery walks for such spring favourites as Daffodils, Anemones, Scillas, Crocuses, Chionodoxas, etc., reserving the borders for summer- and autumn-flowering herbaceous plants.

In large gardens and parks ample opportunities are afforded for naturalising spring-flowering bulbs, and very beautiful results may be attained in this way.

In planting bulbs in grass Barr's Bulb Planter (see page 93), should always be used. It cuts out a clean piece of turf, leaving a hole to receive the bulb, and on making the second cutting clears itself of the first piece of turf, which lies ready at hand for covering the bulb. This handy implement saves an immense amount of time, and does not, as with an ordinary dibber, leave a hard resting-place for the bulb, while by its use the grass is not in the least disturbed. Planting should not take place while the ground is hard, but after the first autumn rains.

Among the many gems which lend themselves to wild gardening and naturalising, we would specially mention the following :-

Wood Anemones (see page 16), including the exquisite Anemone Robinsoniana and the deeper blue and slightly taller Anemone apennina and blanda; one must see these lovely flowers nestling in grass or against the roots of large trees, to appreciate them fully.

Alliums (page 12). Amongst these we would mention Allium Moly, with its bright yellow flowers,

thriving anywhere; also the graceful little Allium neapolitanum, so useful for shady corners.

Anthericums (see below), very graceful and decorative in grass.

Asphodelus luteus and ramosus (page 11), two fine plants for naturalising in grass.

Ornithogalums (page 67), flowering freely anywhere, and producing a very beautiful effect when dibbled in on banks and blended with Tulips, Muscaris, etc.

Tulips. These may often be naturalised on banks where, in the same locality, if planted on the level they die out. Tulipa sylvestris and the dainty little Tulipa persica may be naturalised almost anywhere; the May-flowering Cottage Tulips (page 81) should be freely used for naturalising, especially Picotee, Parisian Yellow, macrospila, Gesneriana, Bonton d'or, etc. Plant at least 6 to 9 inches deep. All Tulips thrive best in partial shade and where sheltered from keen winds.

Wood Hyacinths (Late Scillas) (page 71) should be planted freely in shady walks; they soon make themselves at home and seed plentifully, with the result of much beautiful variation in form

and character. Under pine and fir trees they may be naturalised with success.

Fritillaries (page 29). The purple and white Snakeshead Fritillaries (F. meleagris) are found growing wild in a few districts in England, and thus seen form a charming picture, full of grace and beauty. For shady corners they will be greatly appreciated, also when naturalised in grass.

Dog's Tooth Violets (Erythronium dens-canis, page 28) are lovely little subjects for shady

places where the grass is not too rank.

Crocuses. In grass the bright fresh colours of spring Crocuses contrast charmingly with their carpet of green. The beauty of C. speciosus (page 25) in September must strike every observer, while C. Tommasinianus (page 25) produces a lovely effect in February and March.

Chionodoxas (page 21) are amongst the most beautiful of carly blue flowers, and should be largely used where the grass is kept short and not allowed to grow too coarsc. C. Luciliæ and sardeusis are

followed by the beautiful C. grandiflora and Tinolusii.

Scillas, early-flowering (page 70), such as sibirica, sibirica alba, bifolia, amana, etc., all charming little subjects for naturalising.

Muscari (page 64) "Heavenly Blue" may be termed the QUEEN OF BLUE FLOWERS; for a distant effect, massed on grassy banks or grouped for colour, it has no equal. M. botryoides carnleum and its varieties, flowering earlier than Heavenly Blue, are also charming little subjects to naturalise.

Daffodils. For these favourite flowers, we refer readers to our Daffodil Catalogue.

### System of Planting, Arranging, etc.

In the grouping of Bulbs for naturalisation avoid anything approaching formality, and let the arrangement be a free and unconventional one. A good plan is to scatter the bulbs loosely from the hand and plant them where they happen to fall, thus forming irregular sweeps and breaks of colour here and there.

THE SYSTEM OF PLANTING.—For planting bulbs in grass we have had a Bulb Planter specially made, and by its use much time is saved and the turf is not spoilt. Particulars as to its use are given on page 9. In shrubbery borders and in hard ground our special Bulb Dibber should always be used, the planting taking place after the first autumn rains; a hole is made the requisite depth, some fresh soil put in, and then the bulb inscrted, after which the hole is filled up.

IN SELECTING POSITIONS the first consideration should be what best suits the subjects to be planted: too often shade-loving plants are found struggling for existence in full sun, and vice versa. In the following pages at the heading of each family we indicate as far as possible its cultural requirements. In planting beneath trees select spots where the soil is deepest and the drip least, which means avoiding the main branches or arms.

CUTTING OF GRASS.—It is advisable that this be done as late in September as possible, so as to ensure it being short at the time the bulbs flower. In meadowland Spring-flowering bulbs in no way affect the hay crop, which may be cut at the usual season.

§ indicates those flowers which will thrive in shady places, under trees, on shady banks, etc., or may be planted in the open border.

\* indicates those bulbs, etc., which are essentially wood plants, and should only be grown in shady situations.

For full descriptions see body of Catalogue.

# BULBS AND TUBERS, &c.

### FOR ALL SEASONS AND CLIMATES.

ALPHABETICALLY ARRANGED FOR EASY REFERENCE.

In the following pages we give descriptions, as far as space permits, of the various Bulbs, etc., with general notes as to their cultural requirements. The larger illustrations are mostly reproductions, on a greatly reduced scale, of photographs taken at our Surbiton Bulb Nurseries.

Great care is taken in the selecting of our Bulbs, these being drawn from the best bulb farms only. High-class Daffodils and Tulips, etc., also many little rare and beautiful bulbous plants, we are ourselves large growers of.

Those bulbs and tubers marked thus x ripen late and are sent out from the middle
of October to March. All other bulbs, etc., are ready for despatch in September. Orders
which embrace earlier and later ripening bulbs, etc., will be executed therefore in two parts.
× ABOBRA viridiflora, an elegant scarlet-fruited half-hardy perennial climber; plant
outdoors in Spring and lift the tubers in Autumn, storing them in dry sand in a cool place away from frost
* ACHIMENES, these make charming pot-plants for the greenhouse, and are very decorative
with their brilliantly coloured elegant flowers; pot in rich light soil in Spring and start in a gentle bottom heat.
3 each of 8 distinct varieties, 8/-; I each of 8 distinct varieties, 3/-
Beautiful Hybrids, mixed, containing a great variety of charming colours
per 100, 10/6; per doz. 1/6 — tubiflora (syn. Dolichodeira), a valuable but little known pot plant for greenhouse,
bearing trusses of long tubular white flowers which have a delicious fragranceper doz. 5/6 0 6
ACONITE-Winter. See Winter Aconite.
ADONIS
pyrenaica, a handsome plant, producing in spring large golden yellow flowers; prefers a shady situation, lt. 1 to 1\frac{1}{2} ftper doz. 5/6 o 6
vernalis, bearing large star-shaped clear yellow Anemone-like flowers. April and May
charming when massed on rockwork or borders; it thrives in ordinary soil, ht. $\frac{3}{4}$ ft.
amurensis. See Novelty List, page 5.
" fl. pl. Kikusaki. See Novelty List, page 5.
,, fl. pl. var. Sandasaki. See Novelty List, page 5.
AGAPANTHUS (African Lily), valuable subjects for growing in tubs and pots,
either for greenhouse or summer decoration in porches, on verandahs, terrace walks, and
lawns, etc. They are also very effective planted out by streams, lakes, and ponds. During
severe winters they should be covered with light litter or long manure, or in very cold climates lift the tubers in October and store in dry soil, replanting them in March. This
plant is a gross feeder, and likes a rich soil with plenty of moisture while in growth.
umbellatus, handsome umbels of blue flowers, ht. 3 ft
,, flore-pleno, a very handsome variety with fine double blue flowers,
ht. 3 ft
,, albus, producing handsome umbels of flowers ranging from white to white shaded blue, ht. 3 ft
,, fol. variegatis, foliage handsomely striped, flowers light blue, ht. 3 ft. 2 0
,, Mooreanus, small blue flowers in graceful umbels, ht. 2 ft., per doz. 4/6 0 5
,, St. Pauli. See Novelty List, page 5.
" Weillighi. See Novelty List, page 5.
× ALBUCA, handsome Cape bulbs flowering in June; plant out of doors under a south wall in
Spring, and lift the bulbs in Autumn, or pot up in Autumn for greenhouse culture.
canaliculata, having handsome trusses of almond-scented golden-yellow flowers, ht. 1\frac{1}{2} ft 2 6
fastigiata, producing handsome trusses of white and green flowers, ht. 1\frac{1}{2} ftcrop failed
Nelsoni, a lovely species, producing handsome spikes of almond-scented pure white flowers, with brown stripe down petal (under glass pure white), ht. 3 ftpcr doz. 7/6 0 8
ALLIUM, a decorative and showy family of hardy Spring- and Summer-flowering bulbs, valuable
alike for borders or rockwork and for naturalising in woods, etc. A. neapolitanum is easily forced, and the cut blooms are extensively used for vases and table bouquets.

acuminatum, with beautiful soft rose-lilac-coloured flowers in umbels, ht. 1 ft., per doz. 1/6 0 2

Murrayanum, bearing umbels of bright rosy violet flowers, ht. 1 ft. ,, 2/6 0 3

with its rich dazzling scarlet flowers, and light elegant growth, is the most brilliant and graceful of all Winter- and Spring-flowering Anemones, and should be used largely in wild gardens, orchards, woodiands, on banks, etc. The cut flowers are invaluable for table bouquets or vases, as they last a long time in water. If planted early in Autumn, flowers may be gathered, weather permitting, from Christmas; its hardiness is beyond all question, and the roots may be safely planted any month from August to February, in a position protected from ground winds and with a sunny or S.W. aspect. Anemone fulgens likes a well-drained rich soil (rather dry by preference). Never plant the roots while the ground is wet.

ANEMONES, Various Beautiful Species for Autumn Planting. Where Daffodils are naturalised the following Anemones should be freely planted:—Anemone apennina, the blue Mountain Windflower, forms a dense cushion of rich blue and is one of the loveliest

flowers flaked and marbled white .....each 8d.

ANEMONE BLANDA.

of dwarf Spring flowers. A. blanda resembles A. apennina in flower, but blooms a month earlier. The varieties of Anemone nemorosa (the true Wood Anemone) literally carpet the ground with their charming flowers; being shade-loving plants, they should be planted under trees or in shady nooks on rockwork; while naturalised in grass they present a picture full of grace and beauty. A. nemorosa Robinsoniana is remarkably beautiful. All are exceedingly charming established on rockwork, or as pot-plants. A. palmata likes a damp spot during summer. For other beautiful Anemones, see our Hardy Plant Catalogue.

CALLA, or Arum Lily. See Richardia.

CALOCHORTUS, or more popularly known as the Butterfly or Mariposa Tulips, Globe Tulips and Star Tulips. These lovely Californian bulbs, although belonging to the same Natural Order

GROUP OF MARIPOSA TULIPS.

as the Tulips of our gardens, bear little resemblance to them. They flower through June and July, and for delicacy of texture and brilliancy of colour are unsurpassed; they deserve a place in every hardy flower border and rock garden.

As cut flowers the Calochorti are of great value, the flowers lasting well and the buds opening readily in water; the varieties in the Muriposa or Butterfly section are especially suitable to cut, having long stems and being profuse continuous bloomers.

They all make charming pot-plants (several bulbs in a pot) for the eool greenhouse or Cape pit.

CULTURE OUTDOORS.—The Calochorti are all quite hardy. The "Mariposa" and "Star Tulips" require a sunny position and light gritty or sandy soil on slightly raised beds to ensure perfect drainage; plant from September to end of November, 2 to 3 inches deep, and 3 inches apart. Cover the beds after planting with straw or cut heather, to keep surface sweet and as a protection in case of early growth; remove the covering in March. A position facing south and sunny spots on the rockery are specially suitable. When in full growth give occasional soakings of water, but not too frequently. After flowering, ripen off by placing glass over them, and take up when foliage dies down.

The "Globe Tulips," being woodland plants, like partial shade and a porous soil composed principally of leaf mould.

CHIONODOXA (Glory of the Snow). The Chionodoxa is one of our earliest as well as
loveliest Spring flowers, and when established its sheets of blue in very early Spring are a great attraction in the garden. It should be largely used in borders and dotted over bulb beds, also
massed on rockwork. Unce planted it comes up year after year, the flower spikes increasing in
size and heauty each season. If grown in pots and jardinets the Chionodoxa may be had in bloom early in January, but should be brought on in a cold frame or cool greenhouse close to
the glass. When associated with Narcissus minimus, the effect is very charming. For an effect the first season, plant the bulbs close together.

× CROCOSMA		•				
aurea, lighting up the garden in September with its graceful racemes of brilliant reddish orange flowers, which are greatly prized for cutting, ht. 3 ft. The best treatment is to start the bulbs in pots in Spring and then plant them out in a light rich soil in April or May, there to remain undisturbed, but giving a light covering during Winter. For filling beds and massing in borders or as a pot plant (6 bulbs in a pot) the Crocosma can be strongly recommended						
imperialis, a grand acquisition, producing in September flowers nearly 4 inches across, and of a fiery orange-red colour; a tall and vigorous grower, and exceedingly showy, ht. 4 ft. First-Class Certificate R.H.Sper doz. 15/-	I	6				

#### CROCUSES.

The Groeus is one of the earliest flowers of Spring, and occupies a deservedly prominent place in every garden. Planted as an edging in triple lines of one or more colours, the effect is striking. No Spring display surpasses that of broad wavy bands of golden-yellow, striped, purple, or pure white Crocuses when they expand their blossons, in February and March. In lawns and pleasure parks, planted in the grass, Crocuses are extremely effective. In wild gardens, woodland walks, etc., the Crocus should be associated with the violet, the primrose, and the oxlip.

For outdoors plant as shallow as possible, barely covering the bulb; many amateurs plant too deeply, which is often the cause of Crocuses failing to bloom. Early plantings give the best results.

### BARR'S CHEAP SHOWY CROCUSES for Large Plantings.

For a gorgeous effect in early Spring nothing can equal the Golden-Yellow Croeus, large masses of which attract the eye at a great distance. The value of the larger sized bulbs of Yellow Crocuses is that they produce more flowers to a bulb, and are therefore more decorative.

### BARR'S CHOICE NAMED LARGE-FLOWERED CROCUSES. Large Bulbs for Pot-Culture and Flower Beds, etc.

The following large-flowered named Crocuses are the best in cultivation, and we can confidently recommend them for planting in groups, edgings, select beds, and in designs. To obtain the finest effect the bulbs should be planted an inch apart. When grown in pots, plant thickly, and plunge the pots in ashes up to the rims only. When removed from under the ashes, place in an airy situation, and give water very freely at the roots. A charming effect is obtained by growing Grocuses in shallow saucers, using Barr's Fertillsed Fibre and Shell Mixture, or Pebbles and water (the bulbs touching one

another), and this may be accomplished in an ordina	ry sitting-room.

### BARR'S AUTUMN-, WINTER- AND SPRING-FLOWERING SPECIES.

No hardy garden is complete without these floral gems, which carry on a continual display of bloom from August to March, and light up the garden with their bright colours in winter when few other plants are flowering. On rockwork and in grass they form a charming picture, while in pots they make a very pretty effect. In nomenclature we have followed Mr. George Maw's Monograph on the Croci. The delightful effect produced by masses of C. speciosus, C. longiflorus, C. satlyus, C. Tommasinianus, etc., when naturalised, can only be realised by those who have witnessed it.

CULTURAL DIRECTIONS.—Any ordinary garden soil suits these Crocuses. Plant the hulbs as early as possible, and very shallow, barely covering them with soil.

BARR'S AUTUMN-, WINTER- AND SPRING-FLOWERING CROCUSES-continued.

A Full Descriptive List of our Crocus Species, with their native habitats given, may be had on application.

The few species quoted in the following list are mostly those we can offer cheaply in quantity, and we can strongly recommend them for naturalising and massing on rockwork, in grass, etc., where their beauty will delight the eye from Autumn till early Spring.

CROWN IMPERIAL. See Fritiliaria imperialis, page 30.

CYCLAMEN Persicum, for Greenhouse, Large-Flowered Strain, a great improvement on the old strain; plants are of fine compact habit, with flowers large, of rich and delicate colours, and standing well above the handsome foliage.

Plants in Pots set with bud or in bloom, supplied from September to December—per doz. 15/-, 21/-, 25/-, and 30/-; each 1/6, 2/-, 2/6, 3/6, and 5/6, according to size.

Seed for November Sowing.....per pkt. 2/6 and 3/6

### CYCLAMEN. HARDY SPECIES for Rockwork Out-of-Doors.

HARDY CYCLAMEN NATURALISED AT FOOT OF A TREE,

These Hardy Cyclamen require perfect drainage, and shelter from the cutting winds of March and April, and the hot rays of the Summer sun; at the bottom of old walls facing north and on rockwork they are very beautiful, while, nestling in the grass, near the roots and under the shelter of old trees, they produce a most charming effect. In making up a soil for the hardy Cyclamen, add a liberal proportion of old lime or mortar rubbish and some old peat or leaf soil. C. Europeum is fragrant, and flowers August to September. Ibericum varieties and Coum bloom in Spring; Repandum closes the Cyclamen season in April; this species should, in cold districts, be planted in warm protected situations on rockwork, and covered with cut heather, straw, or a few light boughs, to keep off cutting ground winds till March. They may also with advantage be grown in cold frames.

Cyclamen neapolitanum is perfectly hardy, and is covered with bloom during September, while from Autumn to Spring its large and beautifully variegated leaves render it valuable for Winter beds, intermixed with Seillas, Chionodoxas, Leucojums, Miniature Daffodils, Snowdrops, Musearis, etc.

**ERYTHRONIUM (Dog's-Tooth Violets).** In Spring there is no prettier sight than a mass or edging of **Dog's-Tooth Violets**, with their prettily variegated foliage and graceful Cyclamen-like flowers. Naturalised in grass they present a charming picture.

Δ indicates the large handsome American varieties strongly recommended for choice positions in the rock-garden or for pot-culture; they all prefer a partially shaded and moist but well-drained situation. Plant the roots about 6 to 12 inches deep (the lighter the soil the deeper) and surround with sand.

These American Erythroniums will be sent out early in October, and should be planted at once. The other Erythroniums can be supplied in September.

### Barr's Lawn Grasses for September Sowing.

EURYOLES Cunninghami and sylvestris. See Novelty List, page 6.

decoration; in Autumn lift the tubers and store in dry soil during winter .......per doz. 8/6 0 9

Lawns should be renovated in September, after the wear and tear of Summer, sowing at the rate of 1 lb. per 100 square yards. Barr's Thames Embankment Mixture, 1/- per lb.; Barr's Standard Mixture for fine Lawns, 1/8 per lb.; Barr's Dwarf Mixture for extra fine Lawns, 2/3 per lb. Leaflet, with full particulars and many hints on the management of Lawns, sent on application.

FREESIA. Freesias are prized for their delightfully fragrant graceful flowers, which last longer in water than almost any other flower. They are easily grown, and may be forced into

A POT OF FREESIAS.

bloom by Christmas if required. Plant the bulbs in September and October, 6 in a 5-inch pot, or 12 in a 7-inch pot makes a better display. The tops of the bulbs should be buried 2 inches below the surface of the soil, which should be a compost of good mellow loam, well-decayed farmyard manure and a little bonemcal. Care must be taken that there is good drainage. Stand the pots outside on a sunny border and keep them slightly shaded until growth is showing, when expose them to full sun. About the end of October, or before severe frost comes on, remove the pots to the sunny part of a greenhouse and give plenty of air (not draught). Or they may be placed in an airy, sunny window, care being taken not to expose them to draught or the drying heat arising from gas. When the flower buds are opening, a little weak liquid manure water will be found beneficial.

### FRITILLARIA imperialis-the Crown Imperial.

The Crown Imperial (Fritillaria imperialis) is a stately hardy border-plant, very effective in Spring, especially when grouped in woodlands, wild gardens, orchards, etc. Its tall, stout, leafy stem terminates in a cluster of large drooping bell-shaped flowers, surmounted

FRITILLARIA IMPERIALIS (CROWN IMPERIAL).

by a whorl of fresh green leaves. For forming bold groups in the permanent border or on lawns it is of great value, and should be allowed to remain undisturbed. To obtain the best success, plant the bulbs in September, the top 4 to 5 inches helow the surface, and by preference on their sides, to prevent moisture accumulating in the centre. They flourish in a good deep loam. We offer specially strong selected bulbs, superior to what are usually sold, and which we hope will all bloom the first season. The Crown Imperial, however, is a plant which requires to become established to do well.

### GALANTHUS (Snowdrop).

In the early Spring months there is nothing more beautiful than a sheet of the snowy graceful blossoms of the SNOWDROP. In planting, the bulbs should almost touch each other. An effect of surpassing beauty may be obtained by associating SNOWDROPS with SCILLAS SIBIRICA and BIFOLIA, CHIONODOXAS, WINTER ACONITES, etc. Where possible such plantings should be permanent, and the surface of the soil top-dressed in Summer and sown with annuals, such as Nemophila, Leptosiphon, etc., or planted with surface-rooting bedding plants. The SNOWDROP and CROCUS when planted in alternate circles are very effective, and follow each other so closely that no gap is left in the succession.

The SNOWDROP looks charming when nestling in grass, on hedge banks, etc. The turf need not be disturbed if Barr's Bulb Planter be used (see page 93); this cuts out clean holes large enough to take two or three bulbs.

Permanent plantings of Snowdrops hould be made as far as possible in shady situations.

The above Single and Double Snowdrops cannot be guaranteed to flower all true. Amongst the Doubles will be found some Singles, and vice-versa; the admixture however in no way impairs the charming effect they produce in the spring garden.

GALANTHUS Elwes'i, Elwes' Giant Single Snowdrop, a distinct and beautiful species, and the largest and most handsome of all Snowdrops. It has very large snowy globular flowers, the inner segments being marked rich emerald-green and white. The bulbs for naturalising should be planted where possible on slopes or in woodlands, in unmanured soil. They often die after the first year's flowering, but reproduce themselves by seed.

### Barr's Lawn Grasses for September Sowing.

Lawns should be renovated in September, after the wear and tear of Summer, sowing at the rate of I lb. per 100 square yards. Barr's Thames Embankment Mixture, 1/- per lb.; Barr's Standard Mixture for fine Lawns, 1/8 per lb.; Barr's Dwarf Mixture for extra fine Lawns, 2/3 per lb. Leaflet, with full particulars and many hints on the management of Lawns, sent on application.

### ×GLADIOLUS. BARR'S EARLY-FLOWERING VARIETIES.

For Autumn and Winter Planting.

EARLY-FLOWERING GLADIOLUS "BLUSHING (Much reduced).

These beautiful Early-flowering Gladioli should be largely planted for supplying cut bloom from May to July; and for the fine effect they produce in the flower garden. G. Colvillei The Bride is extensively grown in pots and boxes for cutting during April, May, and June. All may be grown in pots for indoor decoration.

CULTURE OUTDOORS.—Select a situation protected from cutting winds and shaded from the midday sun. Deeply dig the ground, working in plenty of rotten manure in the underspit, and see that the soil is made light and friable; plant the bulbs from October to January, at a depth of four to five inches, and in the case of the later plantings soak the bulbs in water a few hours before putting them in the ground. Before severe frost comes on cover with a little long straw litter or other light material, which remove in March. Gladiolus byzantinus and the Colvillei varieties are best planted in October or early in November. If the Summer is dry and the weather hot, give an occasional good soaking of water or weak liquid manure. A mulching of welldecayed manure in early summer will considerably benefit the plants.

CULTURE FOR CONSERVATORY DECORATION .- Plant three to five bulbs, according to size, in a 5- or 6-inch pot, and plunge in ashes up to the rim of the pot in a cold frame or pit, withholding water till the bulbs have started into growth; or, the pots may be buried up to the rim in ashes out of doors under a south wall, a light covering being given during severe frost. When the plants are in bud they may be removed to the conservatory or greenhouse.

#### **XGLADIOLUS BRENCHLEYENSIS.** The Large-flowered Vermilion-Scarlet Gladiolus.

This well-known handsome Gladiolus blooms just before the Gladiolus Gandavensis varieties, and is one of the most valuable for hedding. By successional plantings a brilliant display of bloom may be had from middle of July to late autumn. A fine effect may be produced by massing this Gladiolus with Galtonia candicans, the snowy white spikes of which top the Scarlet Gladioli; both bloom about the same time.

#### HEPATICA. Old English Flowers.

These are charming Spring flowers, and have been favourites in English gardens from time immemorial. Established on shady banks, in beds, borders, and on rockwork, they are most beautiful in early Spring. The Hepatica is a deep rooter and loves a deep loamy soil in somewhat shady and sheltered positions. Naturalised, the Hepatica looks charming. Plant from Autumn to early Spring.

The Single Blue, Single Red, and Double Red can sometimes be supplied in established elumps at

2/6 and 3/6 each. Blue Single .....plants, per doz. 5/6 o 6 Blue Double.....plants 6 6 6 White Single, a very beautiful variety 6

HOMERIA collina (Bobartia), a beautiful Sparaxis-like plant, producing in May a profusion of orange-red flowers with yellow centre, measuring 21/2 inches across, ht. 2 ft., cultural treatment same as for Ixias ...... ......per 100, 5/6; per doz. 10d.

# BARR'S CHOICE NAMED HYACINTHS.

For Glasses, Jardinets, Bowls, Pots, and for Exhibition.

Culture in Pots.—The soil should be a compost of good fibrous loam with a liberal addition of leaf-soil, sharp sand, and thoroughly well-decayed cow manure. PHYTOBROMA (see page 94) may also be added at the rate of 1 lb. per bushel. The compost should be well mixed and left to stand some time

before being used. New pots should be well soaked in water before use.

In potting, barely cover the bulb, and let the soil be \{ in. below the rim of the pot, to allow for watering. After potting give one good watering and then place the pots outdoors on a bed of ashes, cover with six inches of eoeoa fibre, and leave them exposed to all weathers. When the bulbs have well rvoted, and made about an inch of top growth, they may be removed indoors, first into a subdued light, until the blanehed foliage has attained its full green colour, and then into the sunniest situation at command in the greenhouse or conservatory. It is a good plan to place an inverted flower pot over the young growths for a few days after being removed from the plunging bed, as by so doing they are protected from possible draught. Abundance of air, a moderately moist atmosphere, and plenty of water at the roots are then necessary for early well-developed flower-spikes. A dry or frosty atmosphere or a draughty situation will cause the flower-buds to shrivel. Forcing should only be done gently, the temperature not exceeding 60 degrees. A too frequent fault made in forcing Hyacinths is that they are subjected to heat before the bulbs are fully rooted.

For earliest flowers-namely, for January and February-pot middle of September and leave in the

plunging bed 10 to 12 weeks.

HYACINTHS FOR POT-CULTURE-continued.

Go If finely developed trusses and rich colours are preferred to very early flowers, the Hyacinth should not be forced; put up the bulbs middle of October and leave them plunged out of doors three months or more, according to season, then remove them to a mild temperature like that of a cool greenhouse, a sitting-room window, or frame, always selecting the sunniest and most genial situation.

Culture in Glasses.—We recommend only Single Hyacinths for glasses. The most reliable sorts for growing in glasses we have indicated by \( \Percent \). Pure clean water (rain-water by preference) the same temperature as the room should be used, with a piece or two of pure wood charcoal in it. The bulb can be made secure in the glass by a piece of fish netting, and its base should at all times just touch the water. Place the glasses in a cool dark place to encourage root growth, and keep supplied with water as required. When nearly full of roots (not before), and an inch or two of top growth has been made, admit them to the light gradually, and then to the sunniest place at command where there is full light and an even airy temperature. Avoid a too dry or frosty atmosphere or a draughty situation, as such conditions will often cause the flower-buds to shrivel up. A little rain-water gently sprinkled daily on the green flower-spikes will assist in their development. Barr's Fertilised Fibre, Shell and Charcoal Mixture is an excellent material for growing Hyacinths in, and is clean and inoffensive to handle (see page 2 for directions).

Culture in Jardinets.—For this purpose Barr's Fertilised Fibre, Shell and Charcoal Mixture is undoubtedly the best material to use. It should be always kept moist, and when the jardinet is removed to the sitting-room the surface should be covered with fresh green carpet moss or mossy Saxifrage. Grown in jardinets, Hyacinths are charming when associated with early Spring-flowering bulbs like Chionodoxas, Scilla sibirica, Snowdrops, Tulips, Crocuses, Narcissi, Iris reticulata, etc.

Hanging Moss Balls of Hyacinths.—Very charming hanging baskets of Hyacinths can be made with balls of fresh Sphagnum moss, 9 inches in diameter. First make up a hall of moss about 8 inches in diameter, into which insert the Hyacinth bulbs all round, binding them in with tarred string and more moss so that only their points are visible. Then run a wire through by which the ball can be suspended in greenhouse or sitting-room window. No more attention will be required except to dip the ball in water about once a fortnight. Such hanging baskets can be effectively made with Named or Bedding Hyacinths, and also with Roman Hyacinths. The open wirework baskets which are sold can be filled in the same way.

## BARR'S NEW "PRIZE-WINNING" EXHIBITION HYACINTHS.

A very careful selection of a few of the finest Hyacinths for Exhibitors.

We have selected these varieties out of many hundreds, as being specially suitable for exhibition on account of their grand spikes of fine form, their large bells and beautiful colours. Several of them are new varieties, and a great advancement on existing kinds. Most of them have been awarded prizes and certificates of merit.

Ψ indicates those sorts which should be selected where the bulbs are required for growing in glasses.

# BARR'S "EXTRA SELECTED" NAMED HYACINTHS.

#### Bulbs the Finest of the Season's Crop.

The varieties of Hyaoinths described below, and included in the following selections, we have personally selected during our many visits of inspection to the Finest Hyaointh Farms in Holland, and experience has proved them the most worthy of cultivation.

For the convenience of buyers we have indicated the relative earliness or lateness of the various kinds by (1), (2), (3), (4): thus those marked (1) are the first to bloom, those marked (4) are the latest.

# BARR'S SELECTED BEDDING HYACINTHS. For Bedding, Boxes, Bowls, or Pot-Culture.

The following Hyacinths we have specially selected after many careful trials at our Surbiton Nurseries as being the very best for bedding together or alone. They all have good-sized, well-formed spikes of distinct pure colours. We also recommend them for filling flower boxes, rustic baskets and vases, etc., and for making into hanging baskets (see page 38).

# BARR'S "RAINBOW" MIXTURES OF HYACINTHS.

For Filling Beds and Planting in Borders, etc.

Barr's Beautiful "Rainbow" Mixture of Hyacinths. These are grown specially for us on one of the large Hyacinth Farms in Holland, and are unsurpassed for quality. The colours are judiciously blended, including red, scarlet, purple, lavender, porcelain, azure-blue, white, rose, blush, etc., producing a magnificent effect in flower beds and borders. Purchasers cannot fail to be pleased with them.

Extra selected bulbs, per 100, 21/-; per doz. 2/9

# MINIATURE HYACINTHS for Children's Gardens, etc.

In children's gardens and small flower-beds, or as front edgings and ribbons, these Miniature Hyacinths, alone or intermingled with other dwarf Spring-flowering bulbs, make a fine display throughout the Spring months. They are also valuable for growing in small glasses, fancy pots, china bowls, crystal dishes, jardinets, etc., alone or associated with Scilla sibirica, Chionodoxas, Crocascs, Snowdrops, Dwarf Tulips and Daffodils, Iris reticulata, etc. For cultural directions, see page 2.

# Barr's Tall Flag Irises For Autumn Planting.

A full descriptive List of these fine Border Plants will be found in our Hardy Plant Catalogue, sent free on application.

# EARLY WHITE ROMAN HYACINTH.

BARR'S EARLY WHITE ROMAN HYACINTHS GROWN IN BOWL OF PEBBLES AND WATER.

6 in. deep; the flowers are of great beauty.

#### Extra Selected French-grown Bulbs.

This charming little Hyacinth is of great value for early forcing, and may be had in bloom during November, December, and January by successional plantings. Several bulbs in a pot make a charming Winter decoration for the greenhouse or sitting-room, while to cut for bouquets and vases the graceful spikes of sweet-scented blooms are highly prized. The Roman and Italian Hyacinths lend themselves readily to culture in bowls of pebbles and water or our fertilised fibre, shell and charcoal mixture. (For Cultural Directions, see page 2.)

# Barr's "Extra Early" PINK ROMAN HYACINTH.

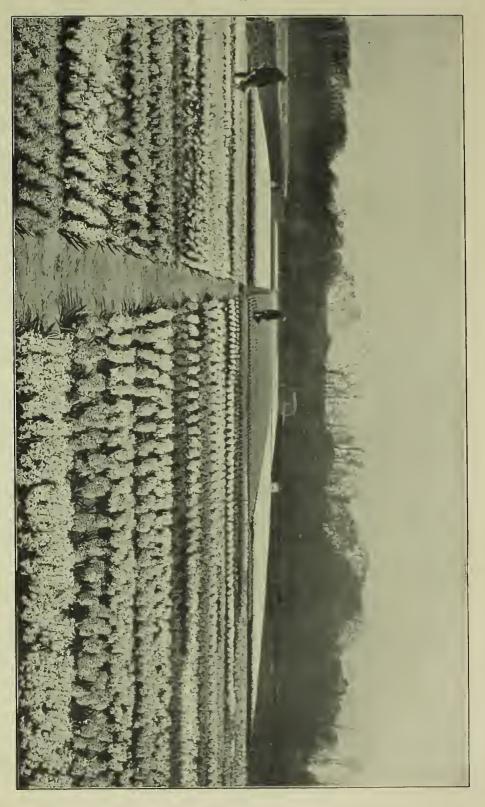

# Barr's "Extra Early" BLUSH ITALIAN HYACINTH.

# ITALIAN EARLY HYACINTHS.

These bloom just after the White Roman Hyacinth, and are therefore valuable for succession. They are all of graceful beauty, and may be had in bloom in December and January. They can easily be grown in bowls of **pebbles and water** or our prepared **Fibre**, **shell**, **and charcoal mixture**, and make a very pretty decoration for the greenhouse and sitting-room.

#### IRISES.

These may be called the "Orchids" of the flower garden, their blossoms competing in richness and variety of colour with the choicest and the most beautiful Orchids. They should be extensively planted in flower and shrubbery borders, and naturalised; a judicious selection will give a display of bloom from Christmas to August. See our Hardy Plant Catalogue for all kinds of Flag Irises.

# BARR'S ENGLISH IRIS.-June- to July-flowering.

The Finest Collection Existing.

These magnificent English Iriscs (I. xiphioides) thrive in any ordinary garden soil. The earlier the planting, after beginning of September, the greater the success, although the bulbs may be put in as late as December. The varieties contained in our collection we have specially selected as being the finest and most distinct, and they will be found as strikingly beautiful in colour as the most sumptuous Orchids of the hothouse. They flower from end of June to beginning of July, thus succeeding the Bearded Flag Irises and Spanish Irises. As cut flowers they take a first place.

to signify Standards or the erect petals; F. Falls, or the drooping petals. The heights given are those recorded at our Nurseries, but they may differ a little according to soil, season, and climate.

The numbers following the name indicate the relative time of flowering; thus those marked (1) open first, while those marked (4) are the latest to bloom; the difference, however, is only one of days.

Per doz. each.

# BARR'S SPANISH IRIS-June-flowering.

The Finest Collection Existing.

GROUP OF SPANISH IRISES (Very much reduced).

These Spanish Irises (Iris Xiphion) flower a fortnight before the English, and differ from them considerably, the colours of the flowers being showier and more varied. The curious and charming blendings of shades in the same flower give them the appearance of many of our rare orchids, with which they can well compete in grace and beauty. For vases and bouquets the cut flowers are greatly prized, as they last long when cut, and the buds open well in water. For filling flower-beds and massing in borders these elegant Irises are of the greatest value. The varieties forming our collection are the finest and most distinct in cultivation. They are easily grown in any good light soil either in an open or partially shaded situation. They will also bear very gentle forcing in pots, but this should not be attempted until the flower buds are developing.

# VARIOUS BEAUTIFUL IRISES.

# Bulbous, Tuberous, and Rhizomatous.

THESE IRIS SPECIES are all hardy and beautiful, flowering one after the other from November to June. The dwarf early species will be more enjoyed if planted on rockwork, where the flowers have a little protection from heavy rains. Alata, Reticulata var. Histrio and Histrioides, Vartani, and Unguicularis (Stylosa) vars., are charming Winter-flowering species, followed in February by I. reticulata, with its lovely violet-scented blossoms, the sweet-scented I. persica, Bakeriana, Danfordiae, and the beautiful species I. Rosenbachiana and Sindpers. Next in succession come the interesting Bucharica, Caucasica, Grant Duffi, Orchioides, Warleyensis, Willmottiana, the curious Snakeshead Iris tuberosa, and the species I. Sindjarensis and assyriaca. These are followed closely by the Cushion Irises, with their large handsome flowers; surpassing in beauty and interest any written description that can be given of them. The pretty Peacock Iris (I. pavonia), the beautiful Iris cristata, and Iris flavissima flower in May, and are followed in June by Irises juncea, Boissieri, Iusitanica, and tingitana.

IRIS-Beautiful Bulbous, Tuberous, and Rhizomatous Species-continued.

Culture.—The Irises marked  $\Theta$  in the following list belong to the Oncocyclus and Regelia sections (Cushion Irises), and are remarkable for their great beauty. These are best planted in December, if the roots can be kept in good condition and from growing until that time (they should be stored in a cool and dry place). Plant so that the tops are not more than  $1\frac{1}{2}$  inches below the surface, in a light loamy but thoroughly well-drained soil into which plenty of bonemeal has been worked (5 lb. to the square yard); cover with three or four inches of wheat straw or, better still, marsh reeds, or cut heather, which remove in March. Immediately the plants have done flowering place over them a hand light, or panes of glass elevated eighteen inches above the ground, so as to admit at the sides a free entry of air, and at the same time to keep off rain till October. The object desired is to thoroughly ripen the roots, and prevent their starting into growth too carly. The covering in Winter is to keep off heavy rains, and discourage a premature growth. The Oncocyclus Irises like to remain undisturbed for years; they may however be remain undisturbed for years; they may however be

premature growth. The **Oncocyclus Irises** like to remain undisturbed for years; they may however be lifted four or five weeks after flowering, and stored on a dry sunny shelf in perfectly dry sand till December. The great beauty of these Irises, especially when seen in established masses, will fully repay the little extra trouble in growing them.

The Irises marked ‡ belong to the Juno section, and thrive best planted in rich light or saudy soil with a light dressing of old manure. As they are mostly winter and early spring-flowering species give them a position protected from the early morning sun.

(Coloured Plate of the Oncocyclus Irises, Gatesii, Lorteti, and Lupina, price 6d. Coloured Plate of Irises, Atrofusca, Bismarckiana, Atropurpurea, and Helenæ, price 6d.)

E. is used to signify **Standards**, or the erect petals; F. **Falls**, or the drooping petals.

# NEW HYBRID IRISES.

## Regelia × Oncocyclus Varieties.

A lovely new race of Irises, being the result of crosses between the Regelia and Oncocyclus sections. They caused a great sensation at the Royal Horticultural Society's Show, May 17th, 1904, when first shown, several being awarded certificates. These Irises have proven to be of easy culture, and we can strongly recommend them to Iris lovers.

Artemis, large flower, with bold standards of a violet-purple profusely veined, fall densely lined violet-purple on white, and having a dark velvety blotch. First-Class Certificate R.H.S	-

#### BARR'S FLAG IRISES.

# Tall Bearded, Dwarf Bearded, and Japanese, etc.

These beautiful Irises form a great feature in our cultures. They supply a floral decoration from March to July. Plant in Autumn—for full descriptive list, see our HARDY PLANT CATALOGUE.

#### IXIA.—The African Corn Lily.

A most graceful plant, bearing on wiry stems 15 to 21 inches high long loose racemes of bloom of remarkably rich and varied colours. All have a brilliant dark centre, and in the sun's rays present a picture of gorgeous beauty.

CULTURE IN POTS.—From October to January plant five or six bulbs in a four- or five-inch pot, using a compost of turfy loam, leaf soil, and silver sand. Make the soil firm about the bulbs, and plunge the pots, up to the rim only, in ashes in a cold pit or frame, or under a south wall. Until a little top growth has been made no water should be given, and then only sparingly at first. When the plants are in growth, the lights should be left off except during wet or frosty weather. Early in February, or when sufficient growth has been made, remove the plants to the greenhouse, keep close to the glass, and carefully attend to the watering.

CULTURE OUTDOORS.—Plant from November to January, at a depth of three inches, and the bulbs two inches apart, on raised beds, in a prepared light loamy soil, in a sunny situation, protected if possible from cold east and northerly winds. When planting cover the bulbs with coarse saud. A covering of straw, litter, heather, or other light material, will protect the early top growth from frosty winds, but it should be removed in March.

ACHENALIA, very beautiful greenhouse plants flowering in early Spring, with curiously		
spotted leaves and handsome flower-spikes. They should be potted as early as possible in		
Autumn in a compost of loam, sweet leaf soil, and sand, the bulbs being placed 2½ to 3 inches below the surface and surrounded by sand; place the pots in a cold frame close to the		
glass with plenty of air, and give very little water until the bulbs have made foliage. In		
carly November, before cold weather sets in, remove the pots to a sunny situation in green-		
house close to the glass where the temperature does not fall below 45°. The Lachenalia		
likes abundance of sunshine but not overmuch heat. A very beautiful effect is obtained by		
planting Lachenalias in wire hanging baskets for greenhouse decoration.  aurea, a very handsome variety with reddish brown stems and targe rich golden bells, early,	ea

# LEUCOJUM (Snowflake).

(Spring-, Summer-, and Autumn-Flowering.)

LEUCOJUM ÆSTIVUM.

Leucojum vernum, the Spring Snowflake, is one of the earliest and most beautiful Spring flowers, handsome in outline and of elegant drooping habit. L. astivum and Hernandezii, the Summer Snowflakes, flower in April and May, and their elegant blossoms are prized for bouquets. L. autumnale and roscum are charming little graceful Snowflakes, blooming in August and September; they are best planted in pure sand. L. trichophyllum resembles autumnale in its graceful flowers, but blooms in Spring; plant in pure sand, and give cold frame treatment, keeping it well moist while in growth. All the Snowdakes delight in shady situations.

autumnale (Acis), white and pink flowers in Autumn, graceful in pots and on rockwork, etc., ht. 4 in.; grow in pure sand in shade; quite hardy

pcr 100, 6/6; per doz. 1s. trichophyllum (Acis), pure white, a rare and very beautiful Spring-flowering species; grow in moist sand, give cold frame or cool greenhouse treatment

# BARR'S BEAUTIFUL LILIES,

per 1000, 60/-; per 100, 6/6; pcr doz. 1/-

# For Naturalising in Flower and Shrubbery Borders, and for Greenhouse Decoration.

For chasteness and beauty of colour and form, the Lily stands pre-eminent amongst hardy plants, and by a judicious selection of species a continuous display of bloom can be maintained in the flower garden or greenhouse from May to October. In the flower or shrubbery border they are most effective when planted in bold groups, while isolated clumps on lawns of the taller-growing Lilies produce a fine effect. The flowers are greatly prized for cutting, as they mix well with other plants and remain fresh in water a long time.

Many amateurs have feared to introduce into their gardens these beautiful flowers, imagining that their culture was too difficult, and beyond them. This, however, is not so. There are varieties which are of the simplest culture, such as *Speciosum*, *Tigrinum*, *Elegans*, *Umbellatum*, and the old Cottage Garden Lilies—Candidum and Croceum. Others require only a little attention as to soil and position, which can be arranged for in most gardens.

#### General Hints on Culture.

Lilies planted out-doors.—The conditions essential to success in growing Lilies may be generally summarised thus:—A cool rooting medium; Perfect drainage; and Shade from hot sun.

These conditions can be readily fulfilled in the borders of Rhododendron and Azalca beds, or amongst the various subjects grown in the herbaceous and shrubbery border. In such positions the young Spring growths are protected from cold winds, and the ground is kept shaded and cool by the shade of the surrounding plants. This is especially needful in the case of those Lilies which make stem roots, as these are only developed freely in shade. On these roots, which are produced at the base of the stem, the flower-head largely depends for its successful development, and the bulb for its preservation. As soon as they appear a light covering of good rich soil should be given, into which they can root freely. The chief stem-rooting Lilies are indicated in the following list by an \*. There are others which are less dependent on these stem roots, which they only produce when the bulbs are planted on rich soil and in shade.

In preparing the ground for Lilies loosen the soil to a depth of 2 feet or more, and add or fill in the necessary compost (see notes below). Plant the bulbs 2 to 3 inches deep, surrounding and covering them with sand, and then top-dress with a compost of light soil and well-decayed manure. As growth advances a mulching of light rich soil should be occasionally given, and during the growing period the plants should be freely watered. In late autumn cut down the old flower-stems and give a light covering of leaves or cocoa fibre.

The Bog or Swamp Lilies—like Superbum, Canadense, and Pardalinum—revel in plenty of moisture and are admirable subjects for the sides of brooks, rivulets, ponds, etc.

Lilies in Pots.—Any one with an unheated greenhouse can easily have a very beautiful show of Lilies in pots during the summer months. The varieties specially recommended for this culture are Auratum, Speciosum, Tigrinum, Chalcedonicum, Umbellatum, Elegans, Testaceum, Hansoni, Henryi, Giganteum, Brownii, Brownii var. odorum, Longistorum, Krameri, and Rubellum.

In potting use a compost of fibrous loam and sweet decomposed leaf soil, with plenty of coarse sand or a mixture of good peat, loam, and sand. See that the drainage is perfect and that the inside of the pot is clean before potting. Pot firmly, barely covering the top of the bulb, and leaving room to add more soil when the surface roots appear. Select a situation out of doors, protected from the afternoon sun, and stand the pots on a bed of ashes raised above the general level to avoid stagnant moisture, and make firm to prevent the entrance of worms; then cover with 6 inches of cocoa-fibre or old leaf soil to keep off excessive rains. When top growth begins to show above the covering, remove the pots to a cold frame, pit, or greenhouse, and start giving water sparingly; a little clear weak liquid manure given twice a week when the flower-buds are well advanced will greatly assist in the development of fine blooms. A north wall or hedge is a suitable situation for starting the bulbs. If very early flowers are required the plants may be transferred from the cold frame into a gentle heat, but must be kept as near the glass as possible to prevent their getting drawn. Shade should be given to the lower portion of the stems to induce free stem-roots, and these should be top dressed as they appear. Give air freely, and fumigate if required. When coming into bloom a little weak manure-water will be of great assistance to the plants.

To those desiring further information regarding Lilies, we commend the following books: Dr. Wallace's "Notes on Lilies" (2/9 post-free), Miss Jekyll's "Lilies for English Gardens" (8/10 post-free), "The Book of the Lily" (by William Goldring), 2/9 post-free; also Vol. XXVI. of the Royal Horticultural Society's Journal containing a report of the Great Lily Conference at Chiswick, July 16, 1901.

LILIES—continued.

The majority of Lilies are not ready for dispatch before the beginning of November; a few sorts, however, are ready earlier, such as Candidum, Croceum, longiflorum, etc., while some of the Japanese imported varieties do not arrive until December. Orders for Lilies will therefore be executed, if necessary, in two or more parts.

#### Soils and Situations Recommended for Different Lilies

Indicates those Lilies of easiest culture, being strong free growers thriving in most soils. Where soil is very dry and poor, add loam and peat, or leaf soil; where heavy and damp, add sand and leaf soil. All require good drainage and plenty of moisture while in growth.

n Indicates those Lilies requiring a good friable soil, not too dry, and the addition of a little peat is

advisable. The lower part of the stems should be kept in shade.

¶ Indicates those Lilies delighting in shady and moist situations, sheltered from strong winds. A welldrained peat soil, where there is bottom moisture for the bulbs to root into, is recommended. Where a brook, stream, or pond is available, they may be planted at the margins, where the bulbs can remain moderately dampand the roots find all the moisture they require below. In planting cover and surround bulbs with sand.

δ Indicates the chief stem-rooting Lilies.

N.B.—For the interest of buyers we have added, after the name, the plant's native country.

I II III M AURATUM.

δΩ Auratum (The White Golden-rayed Crimson-spotted Hill Lily of Japan), ht. 4 to 6 ft. This is indeed the Queen of Lilies, and should have a place in every garden and greenhouse. It commences to bloom in August and continues on into September. It is of simplest culture and perfectly hardy. Those who have beds or borders of Rhododendrons should plant this grand Lily freely amongst them for a succession of bloom. Growing amongst Pæonies, and along the margins of evergreens, groups of L. auratum (6 to 12 bulbs in a clump, planted 9 inches apart), produce a grand effect. As isolated subjects on large lawns, groups of Lilium auratum look very handsome and stately. A situation should be chosen where the plants are sheltered from cutting winds and screened from the midday sun; on slopes, in a free soil, moist but not wet, this Lily does well, and makes a fine effect.

We are expecting our first consignment of this beautiful Lily to arrive early in December from Japan, and we are booking orders for delivery immediately on arrival, at the following prices. The larger-sized bulbs produce the most flowers.

- δΩ Auratum, Extra Large Bulbs, I2 for I5/-; 25 for 28/-; 50 for 54/-; 100 for 105/-
  - Splendid Large Bulbs, 12 for 10/6; 25 for 20/-; 50 for 38/-; 100 for 70/-,,
  - Good-sized Bulbs, 12 for 7/6; 25 for 14/-; 50 for 26/-; 100 for 50/-23
  - Smaller Bulbs, 12 for 5/6; 25 for 10/-; 50 for 19/-; 100 for 36/-
    - A few Special Monster Bulbs, 2/- & 3/- each.

# Barr's Sweet-scented Double Chinese Pæonies for Autumn Planting.

		_
O Giganteum (The Himalayas), the most majestic of Lilies, attaining a height, when established, of 10 to 12 ft., with large handsome heart-shaped leaves, and bearing from July to August immense long white trumpet-shaped flowers. Groups of this noble Lily in large herbaceous and shrubbery borders, woodlands, or wild gardens produce a grand effect. They should be planted in a half shady position, where they can establish themselves. The large flowering bulbs should be potted up and plunged in a cold frame and then be planted out in May, slight protection from early morning frosts being given. If foliage is made late in the season, after flowering, it must be protected during the winter with straw. The smaller bulbs are specially recommended for naturalising, and will bloom freely two or three years after planting.  Monster flowering bulbs	15	0
Very large flowering bulbseach 3/6 & Smaller bulbsper doz. 15/- & 24/-; each 1/6 & ¶ Grayl (North Carolina), a strikingly handsome Lily from the Alleghany Mountains,	-	6

......per doz. 6/6

#### × LILY OF THE VALLEY,

# For forcing, and making plantations out of doors.

The Berlin Forcing Crowns offered below we recommend for general forcing, to come in after Christmas. For flowering before and at Christmas the Retarded Crowns should be used. For outdoor culture the Planting Crowns are recommended.

#### DIRECTIONS FOR FORCING.

Plant 15 to 20 crowns in a 5-inch pot, shaking in a little light soil amongst the roots, until they are tightly potted; leave the crowns free above the soil and a little below the rim of the pot. Place on bottom heat in a moist atmosphere, with a temperature of 80 to 85 degrees (if forced in March a temperature of 70 to 75 degrees will be sufficient), and cover the crowns with a little cocoa fibre or moss, which remove when top growth is showing. Tepid water should be frequently given, care being taken that it penetrates to the centre of the clump. To encourage simultaneously the development of flower and foliage, keep a flower-pot inverted over the crowns, until flower and foliage have made some progress, when gradually admit light. A dry atmosphere, or an insufficient supply of water at the roots, will cause the crowns, technically speaking, to go "blind." Where large quantities of Lily of the Valley blooms are required for cutting, the crowns should be planted rather thickly in boxes and receive the treatment described above.

#### OUTDOOR CULTURE OF LILY OF THE VALLEY.

Out-of-doors the Lily of the Valley likes a partially shaded and moist situation. The best results are obtained on a shady border against a wall, placing the crowns 6 to 9 inches apart and leaving them to establish themselves. The soil should be a good loam enriched with manure and a top dressing of old manure should be given annually. The plants should not be allowed to remain more than three years in one spot.

× Barr's Improved English "Alexandra" Growns, bearing sturdy spikes well clothed with large handsome bells; this strain is specially suited for outdoor culture, but may also be potted and very slowly forced in February or March (not earlier)......per 100, 8/6; per doz. 1/3

x Strong selected clumps, for outdoor planting or slow forcing in pots.

per doz. 10/6; each 1/
× Fortin Grand Giant Strain, a very beautiful strain with remarkably large handsome bells
on long sturdy stalks; the finest of all Lily of the Valley. The flowering crowns offered may be
potted and brought on very slowly under glass, but they must not be potted or boxed up before

March; ordinary forcing will cause them to go blind.

Planting crowns (specially recommended) , 10/6; , 1/6

# RETARDED LILY OF THE VALLEY, Suitable to force for Autumn, Winter and Summer flowering. Growns supplied from July to December and March to June.

FORTIN'S GIANT LILY OF THE VALLEY.

The earlier plantings of the Berlin Retarded Growns will give bloom in about three weeks, but the crowns started in November and December require a little more time. It is necessary that they be planted as soon as received, and grown on rapidly without any check. In June, July, and August all that is needed is to place them in a cold frame, and they come along quickly with very little attention. Later on, however, when the nights become cool, the temperature must be raised to that of the day. Failures sometimes occur with these retarded crowns in October, November, and December because they are not given the warmth they require at night.

The plants should be kept fairly dry overhead, and a warm moist atmosphere should be maintained. As the retarded crowns make a vigorous foliage it is advisable to remove one out of three leaves, as this will assist the development of the flower spike.

The Fortin's Giant Retarded Crowns take a few days longer to develop their flowers than the Berlin Retarded Crowns.

Finest Selected Fortin's Giant Retarded Growns, supplied as required from July to December and March to June...per 100, 21/-

# NARCISSUS POLYANTHUS, or Nosegay Daffodils.

The Polyanthus Narcissi or Nosegay Daffodils produce large heads of sweet-scented flowers, and are specially adapted for Winter and Spring decoration in pots and jardinets, etc. The culture is the same as for Hyacinths. For flower beds and mixed borders they are great favourites, and produce a charming effect. Plant in October or November, and at the approach of winter give a light covering of long litter or other material to keep off severe frosts; remove the covering in March.

Where flowers are in demand from November to January, the Paper White "Early Snow-flake" and Double Roman Narcissi are of great value for forcing with the Roman Hyacinths (see Culture, page 1).

#### Barr's Selections of Polyanthus Narcissi or Nosegay Daffodils.

### NARCISSUS POETAZ-NEW HYBRID POLYANTHUS NARCISSI.

(Hybrids of Polyanthus Narcissi, best forms, and Narcissus poeticus ornatus).

A very decorative new class of Nosegay Daffodis or Polyanthus Narcissi, growing taller than the old varieties, with a less stiff habit, and a looser head of flowers, which are larger and more elegantly formed. They also have the merit of being hardy, and may be naturalised like the true Daffodis. Besides being good border plants they are valuable for culture in pots and jardinets, and will bear gentle forcing. The flowers of these new Narcissi are all delightfully fragrant, and will be found of great value for vases or bouquets.

THE SACRED, OR GOOD LUCK LILY of China and Japan.

Called by the Chinese "Jos Flower," or "Flower of the Gods," and "Water Fairy Flower."

BOWLS OF THE CHINESE SACRED LILY.

This species of Polyanthus Narcissus, which we annually import from Northern China, is prized for the abundance of its flowers and its marvellously rapid growth. The flowers are white, with yellow cup, and very fragrant; they are mostly single, but a few doubles are sometimes found amongst them. Each bulb produces several flower-spikes, bearing many flowers. In China and Japan the bulbs are grown in the living-rooms in fancy bowls filled simply with pebbles and water, and the natives compete with one another in growing the finest specimens for their New Year's Festival, successful culture being regarded as an emblem of "Good Luck." The bulh in this country can be grown as successfully as in China, and it is most interesting to watch its rapid growth, which is about 20 inches in forty days; place in a sunny window by day and on a table near the centre of the room by night, as frost destroys the flower-buds. The natural atmosphere of a warm greenhouse

ner doz. each

is of course most suitable, and we can strongly recommend this flower for Christmas Forcing. Fuller particulars of culture sent with the bulbs. In Cornwall and the warmer parts of the South of England the bulhs after blooming may be planted out to a sunny corner of the garden and covered with heather until the spring; they should there be left to establish themselves, and if protected slightly each winter, give an abundance of early flowers.

PUSCHKINIA libanotica compacta (Lebanon Squill), a bcautiful little April-flowering bulb, prized for the permanent flower border and for rockwork; it is also a lovely indoor pot-plant (6 bulbs in a pot); the flowers are white, shaded and striped soft clear blue, ht. 6 inches per 1000, 42/-; per 100, 4/6; per doz. 8d.

RAMONDIA pyrenaica alba. See Novelty List, page 8.

RANUNCULUS, Turco-Persian, Turban and Persian, ht. 4 ft.

Nothing produces a brighter or more gorgeous effect in May and June than beds of Ranunculus; the flowers are all good for cutting, and the culture is very simple. They thrive in any ordinary garden soil, but should have protection in spring from sharp winds.

CULTURE.—Plant the **Double Turban Ranunculi** from November to March (the earlier the better), and the **Turco-Persian** and **Persian** during February and March. Set the tubers 3 or 4 inches apart, pressing them firmly into the soil, elaws downwards, and covering them with sand, then with soil; keep the crown of the tuber two inches under the surface. After planting cover the ground with eut heather, or other light material, which remove when the plants appear above ground. In April a slight mulching of well-decayed manure will be found beneficial, and during dry weather the plants should be given abundance of water. If grown as pot-plants put three tubers in a 4-inch pot, and plunge out of doors for a time.

RANUNCULUS, Double Turban or Turkish for Bedding.

The flowers of the Turban Ranunculus are large, rose-like, and self-coloured. In beds, ribbons, and masses in the borders, the rich yellow, bright orange, brilliant scarlet, beautiful rose-carmine, and pure white flowers are very effective in spring.

and a black central boss; a very showy plant for beds and flower borders. Plant out of
doors in February or March, or the roots may be potted up earlier and gently forced

\*\*RICHARDIA (Calla or Arum Lily), a charming family of greenhouse plants. R. africana (Æthiopica) is much prized for its beautiful large white flowers; this and its varieties should be grown out of doors during Summer and be brought into the greenhouse at the approach of Winter. The other species should be kept dry, away from frost during Winter, and be started in a gentle bottom heat in February or March. They may then be grown on in pots for greenhouse decoration or planted out of doors in a sheltered position in May. In the latter case the natural soil should be taken out to a depth of 9 inches, and be replaced by a very rich compost, as these plants are gross feeders. Abundance of water should be given as growth proceeds. Albo-maculata, aurata, hastata and Mrs. Roosevelt may also be planted out of doors in a dry state in April for Summer-flowering.

Verna, lovely little heads of lilae-blue flowers; charming for naturalising on

rockwork, etc., ht. 3 in....per doz. 3/6

Any other species in commerce not enumerated above can be supplied if wanted.

SCILLAS (Wood Hyacinths) — May-flowering. Our native species (Scilla nutans), with its long pendent bells, abounds in most parts of the country, and many suppose it to be the "Culver keys" referred to by Izaak Walton. The fine Spanish varieties (S. hispanica) have erect flower-spikes and open campanulate flowers. Scilla patula and its varieties have a robust tall habit with large campanulate open flowers. All are very effective in flower and shrubbery borders, and most valuable for wild gardens and woodlands, where they should be largely naturalised; they seed freely and quickly establish themselves. They also make charming potplants, and may be forced into bloom by March. The white varieties are greatly in demand to cut for table bouquets and vases. Wood Hyacinths succeed in shady flower borders and bare shady places, and odd corners which often have a desert-like appearance in the flower garden can by their use be rendered bright and cheerful. They will also thrive under fir and pine trees where few other plants will grow. Plant 6 inches deep to obtain fine flower-spikes.

#### SPIRÆA (The Meadow Sweet), for Forcing or Planting Out.

SPIRÆA JAPONICA

The large graceful feathery pure white fragrant flowers of Spiræa japonica, compacta multiflora, and Astilboides are most valuable for furnishing vases, while the plants are amongst the most decorative for the greenhouse and sitting-room. In foreing, a moist atmosphere and abundance of vater at the roots are necessary. The pots therefore should be stood in saucers of water. Spiræa palmata and its varieties are very beautiful. In shady or moist borders out of doors, and at the margin of streams and ponds, the Spiræas are all very decorative plants.

the Spiræas are all very decorative plants.

TIGRIDIA GRANDIFLORA ALBA.

Few flowers are more gorgeously coloured or so beautiful. The bulbs are supplied from December to May; for indoor decoration, pot up as soon as received and plunge in a cold frame, withholding water till the foliage appears, then giving sparingly at first. Those bulbs intended for outdoors should be stored in dry soil or peat, away from frost, till March, and then be planted in sunny positions in the flower border in well-drained soil, the bulbs being surrounded with sand. Beds of Tigridias make a gorgeous picture during July, August, and September, and should be made a special feature of in

all gardens.	fea	ture	of in

*speciosum, bright vermilion-scarlet flowers in elusters, quite hardy; grow in northern aspect or shady position, and in a moist soil. Orders booked for delivery in March, when the plants are just starting into growth	1	0
× tuberosum, flowers yellow and red, very showy; plant in Spring and lift in Autumn.  The dried tubers are eaten by the natives of Peru, and in Bolivia they are boiled and then frozen, being much esteemed as a delicacy	0	3
*TUBEROSE. This valuable sweet-scented flower is too well known to need description. For early flowering pot the bulbs as soon as received, and plunge the pots in a temperature of about 60 degrees. The bulbs for succession keep dry, or pot at once to make root growth; in either case the temperature should not be below 50 degrees, or the bulbs will suffer.		
Double American Dwarf, "Excelsior Pearl," the finest strain, having large pure white double flowers of delicious fragrance. Orders booked for supply from Tanuary to May. Extra strong bulbs (6 to 7 in. in circumference), per 100, 15/-; per doz. 2/3	0	3

## Barr's Lawn Grasses for September Sowing.

Lawns should be renovated in September, after the wear and tear of Summer, sowing at the rate of 1 lb. per 100 square yards. Barr's Thames Embankment Mixture, 1/- per lb.; Barr's Standard Mixture for fine Lawns, 1/8 per lb.; Barr's Dwarf Mixture for extra fine Lawns, 2/3 per lb. Leaslet, with full particulars and many hints on the management of Lawns, sent on application.

#### BARR'S FAMOUS TULIPS.

Awarded Six Gold Medals by the Royal National Tulip Society, and many other high Awards at the London Spring Flower Shows. Awarded on May 20th, 1908, the Royal Botanic Society's Gold Medal.

Tulips are extremely hardy, and of easy culture, flowering freely in either sunny or shady situations, and developing their handsome showy flowers even in a confined town garden. By a judicious selection of Single, Double, and May-flowering Tulips, a most brilliant display of colours may be maintained in the garden from early April to end of May. In gardens where the flower beds must be kept gay from the earliest dawn of Spring, plant between the Tulips, Scilla sibirica, Chionodoxas, Snowdrops, and Crocuses; these flower first, and when out of bloom the leaves form a charming green groundwork for the blossoms of the Tulip. Our large breadths of Tulips at the Surbiton Nurseries in Spring create much comment, and elicit the greatest admiration from all who see them. See Illustration on back cover.

# BARR'S EARLY SINGLE TULIPS. Bulbs of Extra Quality.

Those alone who have massed the different varieties of **Single Tulips** (planting the bulbs 4 inches apart) can form an idea of their great beauty and rich diversity in shade and colour, and the grand effect they produce grouped in flower beds or borders. The **Single Tulip** is extensively grown for indoor decoration (three or five bulbs in a pot) and cultivated in the same way as the Hyacinth for early flowering and succession.

The varieties of the little carly **Duc Yan Thol Tulips** (with exception of the scarlet, edged yellow variety, which flowers first) bloom together, and are of the same height, which renders them valuable for beds and borders, where a very early Spring display is required, also for early forcing with the Roman Hyacinth, etc.

Hints as to the arrangement of Early Tulips in beds, etc.—A difficulty is often experienced by Amateurs in knowing what kind of Tulips to select to bed together, seeing that they are not all the same height, and that some arc carlier in flower than others. For the assistance, therefore, of purchasers we have taken special observations at our Nurseries as to the heights and the order in which the Early Single and Double Tulips flower.

Soil and Time of Planting.—Any ordinary garden soil enriched with old stable manure, with a sprinkling of quicklime dug in while fresh, suits the Tulip. Planting out of doors should take place from October to November, not earlier. The bulbs should be planted with their tops 4 in. deep.

Arrangement of Colours in Bedding.—The following varieties if bedded together produce charming effects: Princess Marianue, Ophir d'Or and Wouverman; Pottebakker White and Chrysolora; Prince of Austria, President Lincoln and Chrysolora; Rose Grisdelin and Princess Marianne; Pottebakker Yellow and Thomas Moore; Chrysolora and Dusart; Princess Ida and Rosamundi; Duchesse de Parma and Fabiola; Rosamundi and Rose Superbe; Couleur Cardinal makes a grand show bedded by itself, but Snowdrift goes well with it; Keizerskroon makes a fine bed with Queen Victoria as an outside border-Golden Queen is a grand bedder.

Time of Flowering.—The order of flowering is indicated by (1), (2), (3), (4), or (5) after the name. It will be noticed that the **Double Tulips** generally are a little later-flowering than the Singles. The difference in time of flowering between each number is not great, so that (1) and (2) may be bedded together, also (2) and (3), and so on. The varieties of **Duc Yan Thol** are not numbered, as they flower before any of the others.

Varieties Suitable for Forcing.—The following varieties only should be used for this purpose:

- (1) To bloom at Christmas and early January. Duc Van Thol varieties, Mon Trésor, Pottebakker White, Proserpine, and Vermilion Brilliant.
- (2) To bloom from end of January to early March.—Duchesse de Parma, Josst Van Vondel, La Belle Alliance, Pottebakker White, Primrose Queen, Prince of Austria, Queen Victoria (La Reine), Rose Grisdeliu, Thomas Moore, Vermilion Bvilliant, and Yellow Prince.
- (3) For later forcing, to come in from middle of March to early April.—Couleur Cardinal, Duchesse de Parma, Jost Van Vondel, Keizerskroon, La Belle Alliance, Pottebakker White, Pottebakker Yellow, Frince of Austria, Prince de Ligne, Rosamundi, Rose Grisdelin, Rose Luisante, Rose Superbe, Vermilion Brilliant, White Swan, and White Hawk.
  - For general directions for treatment of bulbs in pots, see page 1.

## Annuals for Autumn Sowing.

Special List of Hardy Annuals suitable for September sowing in the open for early Spring display sent on application.

#### BARR'S DOUBLE TULIPS. Bulbs of Extra Quality.

#### Plant from October to November.

**Double Tulips** have massive flowers of brilliant and beautifully diversified colours, and are very effective in beds on lawns, terraces, etc., also as edgings to beds of Roses and Rhododendrons and to shrubberies. Planted in groups of five or more, they are very attractive. Plant the bulbs four inches deep and four to six inches apart.

Time of Flowering.—The numbers in brackets after the name indicate the order of flowering, and will assist amateurs in making their selections for bedding, thus:—(1) corresponds in time of flowering with (1) of the Single Tulips; (2) corresponds with (2) of the Single Tulips, and so on. The heights, as registered at our Nurseries, are given in inches. By a judicious selection of Double and Single Tulips, a display of brilliant colours may be maintained in the garden for a long period.

**Double Tulips** should be planted three bulbs in a pot, and receive the cultural treatment recommended on page 1.

#### DOUBLE TULIPS SUITABLE FOR FORCING.

To force for earliest decoration, say January, Salvator Rosa may be used; the other varieties do not force successfully so early.

For decoration from the end of January to early March we can recommend the following sorts:—
Couronned Or, El Toreador, Imperator Rubrorum, Lady Palmerston, Murillo, Princess Beatrice, Tournesol,
Tournesol Yellow, and Titian.

For late forcing, to produce blooms from end of March to early April the following kinds should be grown:—Couronne d'Or, Imperator Rubrorum, La Candeur, Le Matador, Murillo, Tournesol, and Tournesol Vellow.

# PARROT, or DRAGON TULIPS, with Laciniated Petals (May-flowering).

These Parrot, or Dragon Tulips, have large characteristic blossoms with curiously laciniated petals, and richly varied shades of beautiful colours in the same flower. They are very remarkable and exceedingly showy and effective in flower borders, while if grown in hanging baskets the drooping flowers look like orchids. In height they average about 15 inches, and bloom with the Cottage and Darwin Tulips.

The following are all selected extra strong bulbs, superior to what are often sold, and may reasonably be expected to bloom; but as in some seasons the Parrot Tulips are rather shy in flowering, to ensure a good display in flower beds and borders it is wise to plant the bulbs only 4 inches apart.

12 bulbs each of 6 beautiful varieties, 7s. 6d.; 6 each, 4s.

Amiral de Constantinople, glossy searlet, shaded and tipped orange, showy per 100, 7/6 I 3

Coffee-Colour, shaded reddish brown on a yellow ground, slightly striped crimson

and green. Inclined to sport...per 100, 8/6 1 3

Crimson Beauty, rich deep blooderimson, with blackish markings, flowers of immense size and very handsome; this variety should be largely used in beds, borders, and baskets, as nearly every bulb flowers freely and produces a most brilliant effect. Certificate of Merit R.B.S., 1897......per 1000, 75/-; per 100, 8/6 1 3

brilliant searlet, purple and green; remark-

Barr's Splendid Mixed, from named sorts, containing a good variety of colours
Strong bulbs, per 1000, 60/-; per 100, 6/6 1 0

#### BARR'S

## Beautiful "Cottage" Tulips and Tulip Species

(All Single and mostly May-Flowering).

Extract from the "Gardener's Chronicle," May 30th, 1908: "Messrs. BARR & Sons had a very extensive and comprehensive group which included choice alpine and herbaceous plants and perhaps one of the most gorgeous displays of Tulips ever seen at a Temple Show."

See Illustration on back cover of Catalogue.

The name Cottage Tulips we have given to the various beautiful May-flowering Tulips which have mostly been found growing in old cottage gardens in England, Scotland, and Ireland, where they have been in some cases for over fifty years. Some have also been traced to old French gardens. They are all very beautiful, presenting a great variety in form and colouring, and having none of the stiffness of other Tulips. On account of their extreme hardiness they are specially adapted for permanent hardy flower borders, where they should be freely planted in large elumps and masses. They may also be naturalised in grass, wild gardens, etc., where during May they present a charming picture. Those who have visited Kew Gardens in Spring will have noticed these Tulips planted freely in grass, and also used largely in filling flower beds on the lawns.

The bulbs should be planted six inches deep on heavy soils, and nine inches deep on light soils.

For cutting, the flowers of these "Cottage" Tulips are highly prized, as the flowers are of elegant outline and have long stems; a free and graceful effect can be readily obtained by their use.

In most eases we give the heights as registered at our Surbiton Nurseries, but these will vary somewhat according to richness or poverty of soil.

Time of Flowering.—The Cottage Tulips take up the succession of flowering as the Early Single and Double Tulips are going out of bloom. As far as possible we have indicated the order of flowering by (1), (2), and so on. (1) will correspond in time of flowering with (5) of the Early Single and Double Tulips. The Parrot Tulips bloom together with those marked (2), and the Darwin with those marked (3) and (4) in the following lists.

Those Tulips marked  $\Phi$  are species, and gems for sunny sheltered nooks in the rock garden, where their lovely flowers will delight the eyes of all who see them. They should be planted 3 to 6 inches deep in light sandy well-drained soil.

BARR'S BEAUTIFUL MIXTURE of Co	ttage lulips for large borders or to

# BARR'S GRAND DARWIN TULIPS All Single and May-flowering

naturalise in wild gardens, grass land, etc. .....per 1000, 50/-; per 100, 5/6 0 10... -

As grown at our Surbiton Nurseries, and exhibited at the London May Flower Shows, where their grand stately flowers elicit the admiration of all. On May, 20th, 1908 our exhibit of these was awarded the Royal Botanic Society's Gold Medal.

See Illustration on back cover.

For flower beds and borders we confidently recommend the following Darwin Tulips for their stately bearing and rich colours. They have been specially selected as being distinct, showy, and beautiful, so that buyers need have no hesitation in choosing the colours they require, as all are good. The cut flowers form an elegant decoration for vases, and last a long time in water. The lighter lilae and heliotrope coloured varieties blend charmingly with yellow "Cottage" Tulips such as Mrs. Moon, Vitellina, Gesneriana lutea and lutea pallida, flava, Yellow Queen, etc.

#### DARWIN MAY-FLOWERING TULIPS - continued.

By gentle forcing in pots these grand Tulips may be had in bloom by March, and will be found of great value for indoor decoration on account of their lovely soft colours and tall stately bearing. The centres of many are most beautifully marked.

In most cases we give the heights as registered at our Nurseries last Spring, also the order of flowering in relation to the flowering period of the Cottage Tulips, (1) being the first to open and (5) the latest.

## BARR'S "GOLD MEDAL" ENGLISH FLORIST TULIPS. Awarded Six Gold Medals by the Royal National Tulip Society.

These beautiful May-flowering English Tulips have been prized by all lovers of the true Florist's Flower for over a century, although of late years the number of growers has diminished. The flowers are of perfect goblet form, and their beautiful and symmetrical markings quite unique.

CULTURE OF ENGLISH TULIFS.—Any good loamy garden soil suits the "English Tulip." The bulbs should be planted four inches deep and four inches apart, from the end of October to early in November, choosing a day when the ground is in nice friable condition; avoid planting when the ground is wet.

HINTS TO EXHIBITORS AND TULIP AMATEURS.—As the English Tulip often suffers much from hail and wind during Spring, it is a good plan, when choice named sorts are grown, to erect over the bed a skelcton framework on which a covering of calico or white canvas is fastened in February or March, leaving the sides open till the buds show colour, when the covering may be brought down over the sides

#### ENGLISH FLORIST TULIPS-continued.

given while in growth.

too. By this means hail, rain, and very hot drying sun are kept off, and the flowers open in all their purity, while the period of flowering is prolonged by some weeks.

To those who wish to know all about the English Tulip, we recommend "The English Tulip," a little pamphlet containing the lectures delivered on this flower at the great Tulip Conference of the Royal National Tulip Society, held at Royal Botanic Society's Gardens, May 12th, 1897, price 1s.

#### BARR'S ENGLISH MAY-FLOWERING TULIPS.

In the above collections the Bizarres embrace the following colours,—self shades of red, crimson, scarlet, maroon, and chestnut; also flakings of orange, scarlet, crimson, brown, and black, on a lemon or golden-yellow ground. The Byblæmens are made up of self shades of purple, violet, lilac, and heliotrope, all with a dazzling white centre; also beautiful flakings of black, violet, purple, and lavender, on a clear white ground. The Roses contain lovely self shades of rose and rose-scarlet; also pretty flakings of delicate pink, soft rose, glowing scarlet, and deep crimson on a pure white ground.

Barr's Choice Mixture of Beautiful English Florist Tulips, in great variety, comprising Bizarres, Byblœmens, and Roses. When massed in quantity in beds and borders these beautiful Tulips present a brilliant picture, resembling a richly coloured Persian carpet

WINTER ACONITE (Eranthis hyemalis),	its golden blossoms carly in Spring are very
beautiful, resting on emerald green cushions o	leaves, produce a charming effect in February
especially when associated with Snowdrops,	Early Scillas, Chionodoxas, Anemone fulgens,
Anemone apennina, etc. Under trees as	id in moist situations, where few other
plants will thrive, the Winter Aconite lux	iriates, and densely clothes the ground with
its bright green to liage long after the flowers	have disappeared. It is a good useful plant
to naturalise in grass, etc	flowering rootsper 1000, 15/6; per 100, 1/8 -
· Ext	ra strong roots 21/: 2/3 —

Saint Joseph, a most productive variety, fruit of medium size, flesh red, very sweet and melting	e in

### USEFUL TOOLS FOR BULB PLANTING, Etc.

Barr's Special Bulb Planter (Regd. 368338) specially designed for planting Daffodils and other bulbs in grass. This tool cuts and lifts a clean circular piece of turf, which is released from the cup when the second hole is made, and lies ready at hand to fill in the holes when the bulbs have

been put in, it being only necessary to remove a little of the soil from the bottom of the sod. A time must be chosen for planting when the ground has become softened after early Autumn rains, and not when in a hard and baked condition, as it is then impossible to use this, or indeed any other, tool with success. By the use of

BARR'S SPECIAL BULB PLANTER a large quantity of bulbs may be planted in a very short time, and without the least disturbance of the sward. The length of the tool is 38 inches over all, weight about 3½ lbs. The cup is manufactured from high-class hardened steel and always carries a keen cutting edge.

Supplied in 3 sizes of cup:—To cut out a circular hole 2 inches diameter 10/6 each.

We shall send the medium size  $(2\frac{1}{4}$  in.) if no instructions to the contrary are given.

Barr's Special Bulb Dibber (Regd. 468878), specially designed for dibbling bulbs into borders, etc.; steel shod, with strong iron tread and cross wooden handle; a good strong heavy tool, weight about 6¾ lbs., length 36 inches over all. 9/6 each.

Barr's Special Bulb Trowel, made of best steel, specially designed for lifting and planting bulbs, etc. It will be found of great value for general garden purposes, and far in advance of the old-fashioned trowel. 2/9 each.

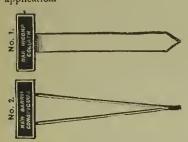

New Pattern Daffodil Hoe, a very useful tool for breaking the surface soil in the Flower Border during dry weather, and especially in early spring when Daffodils are just showing; also a useful weeding tool. With 3 ft. handle (41 inches over all, and weight under 1 lb.), 1/9 each, with short handle (12½ inches), 1/3 each.

Garden Trowel, solid cast steel, finest quality, 5 in., 1/2; 6 in., 1/3; 7 in., 1/6 each.

#### SET OF LADIES' GARDEN TOOLS (best quality), CONTAINING:

Solid cast steel Spade, 5½ in. by 9 in.; cast steel Fork, 4 pronged; light American-pattern Rake, 8 teeth, well-handled; Draw Hoe, cast steel, well-handled, 6 in.; 12/6 per set.

For a fuller list of Tools and other Garden Requisites, see Barr's Seed Guide, free on application.

#### BARR'S SPECIAL METAL LABELS FOR BULBS, Etc. With Raised Lettering.

No. 1, with solid metal shank, about 9 inches long. We

specially recommend this for beds and borders. 4d. each. No. 2, with stout wire stem, 6 or 9 inches long; specially suitable for pots, etc. (in ordering please state whether a short or

long stem is required). 3d. each. The above prices include the stamping of any name required.

These labels are only made to order. The time taken to execute an order is generally from 2 to 3 weeks.

Labels, Wooden, for pots, etc., painted white, superior quality, packed in boxes of 100 each.

per 100, 4 in., 8d.; 5 in., 10d.; 6 in., 1/-; 7 in., 1/3; 8 in., 1/6; 9 in., 2/-; 12 in., 3/
,, for suspending, painted white, superior quality, 4 in., per 100, 9d.; 6 in., per 100, 1/
yery stout, best yellow deal, planed and pointed, tarred bottoms 14 in. long, 1½ in.

wide d inch thick superior quality. Nurseries repired with certificate white point wing. wide, ½ inch thick, same as we use at our own Bulb Nurserics, painted with ordinary white paint, using raw linseed oil, and written on while paint is wet with Wolfi's indelible ink pencil, will last 3 to 4 years, per 100, 14/6; per doz. 2/-.

For Metallic Garden Labels, New "Ideal" Metallic Labels, etc., see BARR'S SEED GUIDE.

HYACINTH GLASSES, Plain colonrs, or Fancy Designs, 6d., 8d., 10d., 1/-, to 1/6 each; per doz. 5/6, 7/6, 9/6, 11/6, to 16/6. Wire Supports (brass), 4/6 per doz.

#### MANURES, SOILS, COCOA FIBRE, etc.

Barr's Phytobroma, the best Manure for Daffodils, Hyacinths, Tulips, etc. It should be mixed with the soil below the bulbs at planting time at the rate of 2 to 3 ozs. to the square yard, and in spring, when the bulbs are showing above ground, a top-dressing may be given of 3 oz. to the square yard. For Pots, mix *Phytobroma* with the soil, to be used at the rate of 1 lb. to the bushel, and in Spring, when growth is showing, top-dress once a fortnight, using a small teaspoonful and well mixing with surface soil. 2-lb. tin, 1/-; 7 lb. 2/6; 14 lb. 4/6; 28 lb. 7/6; 56 lb. 12/6; I cwt. 20/-.

Basic Slag, per cwt. 10/6; per 7 lb. 1/-.

Bone Meal (Genuine fine Crushed Bones), best quality, per cwt. 14/-; per 7 lb. 1/3.

Sulphate of Potash, per cwt. 21/-; per 7 lb. 1/9.

Clay's Fertiliser, a well-known effective manure, confidently recommended. Tins 6d., 1/-, and 2/6 each; in bags, 7 lb., 2/6; 14 lb., 4/6; 28 lb., 7/6; ½-cwt., 12/-; 1 cwt., 20/-.

Ichthemic Guano, 7 lb., 2/6; 14 lb., 4/6; 28 lb., 7/6; 56 lb., 12/6; 1 cwt., 20/- (bags free). Sample tins, 6d. and 1/-.

Standen's Gardeners' and Amateurs' Manure, in tins, 6d., 1/-, 2/6 and 5/6; in bags, 28 lb., 10/6; 56 lb., 18/-; 1 cwt., 32/-.

Thomson's Vine and Plant Manure, 1 lb., 1/-; 3 lb., 2/-; 7 lb., 3/6; per \( \frac{1}{4} \) cwt., 6/-; ½-cwt., 10/-; I cwt. 20/-.

Barr's Specially Prepared Fertilised Fibre, Shell, and Charcoal Mixture for growing Bulbs in Bowls, Jardinets, Glasses, etc. Specially recommended for Hyacinths grown in glasses: fill the glasses with the preparation, and add water till no more can be absorbed. Place the bulb so as to rest the base on the preparation, and tic it down with brown paper, leaving an opening in the centre of the paper for the shoot. When the bulb has well rooted the paper may be removed; care must be taken that the material in the glass is kept wet. The same remarks apply to bulbs grown in bowls, etc.: they must be kept in place till they have rooted. 3/6 per bushel; 1/- per peck.

Jadoo Fibre, cleanly to use, very light, for growing plants and bulbs in hanging baskets, jardincts, etc. Full particulars on application. Per pcck, 1/-; per bushel, 3/6; per 3 bushels, 8/-.

Loam, Peat, Leaf Soil, Silver Sand, cach, per bushel, 2/6.

Barr's Specially Prepared Potting Soil, containing a suitable quantity of Phytobroma, per bushel, 2/6.

Cocoa Fibre, superior quality, one bushel, 1/6; 3 bushels for 3/6 (bags free).

Small Pebbles and Charcoal, suitable for growing Hyacinths, etc., in bowls and vases without drainage, 6d. per quart; 3/6 per pcck.

For a fuller List of Garden Requisites, see BARR'S SEED GUIDE, free on application.

## Special Notices and Terms of Business.

## FREE CARRIAGE OF BULBS.

- All Orders for Bulbs to value £1 and upwards sent Carriage Paid to any Railway Station in the United Kingdom.
- Prepaid Orders for Bulbs to value 10s. and upwards sent Carriage Paid to any Railway Station in the United Kingdom.
- 5% Cash Discount on Bulb Orders of 20s. and upwards.—1s. in the £ discount is allowed for Cash with Order (with the exception of the special Collections offered on pages 3 and 4, which are strictly nett), and this may be deducted by the Customer when remitting, or if this is not done, a liberal equivalent in goods will be added to the Order. The same discount may also be deducted from all Bull Accounts of 20s. and upwards when paid within 14 days from date of invoice (excepting Collections offered on pages 3 and 4, which are strictly nett).
- Terms of Credit. Our books are made up at Christmas and Midsummer, when all accounts are
- Remittances.—Money Orders and Postal Orders should be made payable at Bedford Street Post Office; these and all Cheques should be crossed "London and County Bank." Small amounts may be remitted in Postage Stamps or Coin, in a Registered Letter.
- Packages.—Boxes, Bags, etc., are charged at cost price, but these may be deducted from our account if returned Carriage Paid within a fortnight. Returned empties should have the sender's name on the address label for identification, and an advice sent by post, stating date of despatch and name of Railway Co.
- Catalogues. —Our Seed Guide is published in January, Descriptive Catalogue of Bulbs and Tubers for Winter and Spring Planting in January, Hardy Plant Catalogue 1st of March, Daffodil and General Bulb Catalogues in August. We are always pleased to forward any of these Catalogues, free of charge, to friends of our Customers on receipt of a line requesting us to do so.
- Our Surbiton Nurseries. Visitors are invited during Spring to see our magnificent Collections of Dassodils and Tulips in bloom. The Nurseries are situated less than a mile from Surbiton Station on the London and South-Western Railway. Cabs are always to be had at Surbiton Station.
- Gardeners.—We keep a special Register of Gardeners in want of situations, and shall be pleased to put such in communication with any of our Customers requiring Head Gardeners.

## Notices to our Foreign and Colonial Correspondents.

- Prepayment necessary.-Owing to the difficulty of collecting accounts abroad, we beg that Customers will kindly enclose with their Orders a remittance, a draft, or an "order to pay" on a London Bank, or Agent; the remittance should be sufficient to cover cost of carriage when the freight is required to be paid in advance.
- Cash Discount 5%.—In the case of Prepaid Orders to value 20s. and upwards we allow a discount of is. in the £ from the amount of Bulbs or Seeds ordered, which may either be deducted by the Customer when remitting, or if this is not done, a liberal equivalent in goods will be added to the order.
- Carriage .- No allowance for Carriage can be made in the case of Foreign Orders; the extra attention necessary precludes any kind of allowance in this respect.
- Packing.—A moderate charge will be made where special materials have to be used, such as Sphagnum Moss, Oil-silk, or hermetically sealed tin cases, and where any special packing necessitates a great deal of labour (as in the case of some Plant Orders), when out-of-pocket expenses only will be charged.
- Parcel Post Rates .- AUSTRALIAN COMMONWEALTH (P. & O. and Orient Lines direct): 6d. per lb. (1s. for the first lb.). Via Italy (journey 6 days shorter): not exceeding 1 lb., 2s.; every additional lb. 6d.

  - Additional 10. 0a.

    NEW ZEALAND: under 3 lb. 1s.; 7 lb. 2s.; 11 lb. 3s.

    TASMANIA: 6d. per lb. (minimum charge 1s.).

    CAPE COLONY and NATAL: 9d. per lb. TRANSVAAL: 1s. per lb.

    INDIA (P. & O. Line direct): Under 3 lb., 1s.; under 7 lb., 2s.; under 11 lb., 3s. Via italy

    (journey a week shorter): Under 3 lb., 2s.; under 7 lb., 3s.; under 11 lb., 4s.

    CANADA: 6d. per lb. (8d. for the first lb.).

  - JAPAN (via Canada, 26 days to Yokohama): Under 3 lb, 2s.; under 7 lb., 3s.; 11 lb., 4s.
    CIIINA (via P. & O. Line direct): Under 3 lb., 1s.; under 7 lb., 2s.; under 11 lb., 3s. Via Italy
    (journey one week shorter): Under 3 lb., 2s.; under 7 lb., 3s.; under 11 lb., 4s.
    UNITED STATES of America. By Official Service to all places in U.S.A. Under 3 lb., 1s. 6d;
    under 7 lb., 2s. 6d.; under 9 lb., 3s. 6d.; under 11 lb., 4s. 6d.
- Shipping, etc.-In Shipping Bulbs and Plants to Australia, New Zealand, America, India, and the Cape, we exercise great care in selecting, preparing, and properly packing the same. Still there are so many contingencies that we cannot, in any way, hold ourselves responsible for the condition in which Plants or Bulbs reach their destination. Our Customers will confer a favour if they report, on arrival, the condition of the goods. Our experience in successfully preparing and shipping Seeds, Bulbs, and Plants to India and the Colonies extends over a long period.
